Blindsight A Case Study And Its Implications:

Blindsight Lawrence Weiskrantz, 1986 This book gives a detailed discussion of the puzzling phenomenon of blindsight focusing on research conducted over ten years on an individual case and incorporating findings from the work of other investigators

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009
Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon

Hidden Minds F. R. Tallis, 2012-05 Hidden Minds traces our enduring fascination with the unconscious and our attempts to tame it through hypnosis psychoanalysis subliminal manipulation lucid dreams and even the principles of the quantum

Human Cognitive Neuropsychology Andrew W. Ellis, Andrew W. Young, 2013-05-24 This textbook augments the first edition through the inclusion of a set of research and review papers selected by the authors to supplement the contents of each chapter by providing a discussion of research issues and detailed investigation of individual cases One or two papers supplement each chapter A short introduction to each set makes clear the nature of their contribution and how they relate to each chapter's contents Some of the papers are short reviews of theoretical contributions others are case studies in the tradition of cognitive neuropsychology At least three of the main trends discernible in cognitive neuropsychology in the 1990s are represented in the chosen papers The first is the use of connectionist models to simulate patterns of impairment in

brain injured patients The second is the growing convergence between cognitive neuropsychology and neuroscience cognitive neuropsychologists are becoming increasingly interested in the brain processes that underlie the preserved and damaged psychological processes they study The third trend is the involvement of cognitive neuropsychologists in work on therapy and rehabilitation

Writing and Reading the Scroll of Isaiah Craig C. Broyles, Craig A. Evans, 1997 The studies in this volume investigate Isaiah's use of early sacred tradition the editing and contextualization of oracles within the Isaianic tradition itself and the interpretation of the book of Isaiah in later traditions as in the various versions and interpretations of the text

Neural Correlates of Thinking Eduard Kraft, Balázs Gulyás, Ernst Pöppel, 2008-11-14 The advances in neuroimaging technologies have led to substantial progress in understanding the neural mechanisms of cognitive functions Thinking and reasoning have only recently been addressed by using neuroimaging techniques The present book comprehensively explores current approaches and contributions to understanding the neural mechanisms of thinking in a concise and readable manner It provides an insight into the state of the art and the potentials but also the limitations of current neuroimaging methods for studying cognitive functions The book will be a valuable companion for everyone interested in one of the most fascinating topics of cognitive neuroscience

Writing and Reading the Scroll of Isaiah, Volume 1 Craig C. Broyles, Craig A. Evans, 2014-09-03 This first part of a 2 volume work this study combines recent approaches that treat the formation and early interpretation of the final form of the book of Isaiah with the more conventional historical critical methods that treat the use of traditions by Isaiah's authors and editors Studies investigate Isaiah's use of early sacred tradition the editing and contextualization of oracles within the Isaianic tradition itself and the interpretation of the book of Isaiah in later traditions as seen in the various versions of the text and various communities Contributors of this volume include virtually all of the major scholars of Isaiah and the leading scholars of biblical interpretation in the intertestamental New Testament and early Jewish periods

Ten Problems of Consciousness Michael Tye, 1997-01-22 Can neurophysiology ever reveal to us what it is like to smell a skunk or to experience pain In what does the feeling of happiness consist How is it that changes in the white and gray matter composing our brains generate subjective sensations and feelings These are several of the questions that Michael Tye addresses while formulating a new and enlightening theory about the phenomenal what it feels like aspect of consciousness The test of any such theory according to Tye lies in how well it handles ten critical problems of consciousness Tye argues that all experiences and all feelings represent things and that their phenomenal aspects are to be understood in terms of what they represent He develops this representational approach to consciousness in detail with great ingenuity and originality In the book's first part Tye lays out the domain the ten problems and an associated paradox along with all the theories currently available and the difficulties they face In part two he develops his intentionalist approach to consciousness Special summaries are provided in boxes and the ten problems are illustrated with cartoons A Bradford Book Representation and Mind series

Neurovision: Neural

bases of binocular vision and coordination and their implications in visual training programs Olivier A. Coubard, 2015-10-12

Binocular vision is achieved by five neurovisual systems originating in the retina but varying in their destination within the brain. Two systems have been widely studied: the retino tectal or retino collicular route which subserves an expedient and raw estimate of the visual scene through the magnocellular pathway and the retino occipital or retino cortical route which allows slower but refined analysis of the visual scene through the parvocellular pathway. But there also exist further neurovisual systems: the retino hypothalamic, retino pretectal and accessory optic systems which play a crucial role in vision though they are less understood. The retino pretectal pathway projecting onto the pretectum is critical for the pupillary or photomotor reflex. The retino hypothalamic pathway projecting onto the suprachiasmatic nucleus regulates numerous behavioral and biological functions as well as circadian rhythms. The accessory optic system targeting terminal lateral medial and dorsal nuclei through the paraoptic fasciculus plays a role in head and gaze orientation as well as slow movements. Taken together, these neurovisual systems involve 60% of brain activity, thus highlighting the importance of vision in the functioning and regulation of the central nervous system. But vision is first and foremost an action which makes perception impossible without movement. Binocular coordination is a prerequisite for binocular fusion of the object of interest on the two foveas, thus ensuring visual perception. The retino collicular pathway is sufficient to elicit reflexive eye movements with short latencies. Thanks to its motor neurons, the superior colliculus activates premotor neurons which themselves activate motor neurons of the oculomotor, trochlear and abducens nuclei. At a higher level, a cascade of neural mechanisms participates in the control of decisional eye movements. The superior colliculus is controlled by the substantia nigra pars reticulata which is itself gated by subcortical structures such as the dorsal striatum. The superior colliculus is also inhibited by the dorsolateral prefrontal cortex through a direct prefrontotectal tract. Cortical areas are crucial for the triggering of eye movements: the frontal eye field, supplementary eye field and parietal eye field. Finally, the cerebellum maintains accuracy. The focus of the present research topic, entitled "Neural bases of binocular vision and coordination and their implications in visual training programs", is to review the most recent findings in brain imaging and neurophysiology of binocular vision and coordination in humans and animals with frontally placed eyes. The emphasis is put on studies that enable transfer of knowledge toward visual training programs targeting visual field defects, e.g. hemianopia and binocular functional disorders, e.g. amblyopia.

Metagnosis

Danielle Spencer, 2020-10-08. This book identifies and names the phenomenon of metagnosis: the experience of newly learning in adulthood of a longstanding condition. It can occur when the condition has remained undetected, e.g. colorblindness, and/or when the diagnostic categories themselves have shifted, e.g. ADHD. More broadly, it can occur with unexpected revelations bearing upon selfhood, such as surprising genetic test results. This phenomenon has received relatively scant attention, yet learning of an unknown condition is frequently a significant and bewildering revelation subverting narrative expectations and customary categories.
