contends that China's potential threat to the existing global order is not derived from her rapid economic growth and military expansion but from her potential domestic chaos. A strong democratic China will contribute to the global peace but the collapse of China will gravely threaten Western societies. The current Chinese political system directly contributes to this social instability and could possibly cause China's social crash. China's democratization is the key to ensure China's peaceful rise in a global context. However, the Party is still in power and any attempt to dissolve the one party system in present day China has poor prospects. China must take a two step gradual reform approach to complete the transition from an authoritarian regime to a democratic one. In the two step theory the first phase for promoting China's democratization includes exercising freedom of media, increasing the consciousness of citizen participation and enacting religious rights. Through all these democratic exercises China will gradually be able to achieve a fully democratic society. This two step theory is crucial for the United States if it is to enact effective foreign policy toward China and for China to develop a democratic harmonious society.

China's economy looks toward the year 2000, 1986. **China's Economy Into the New Century** John Wong, 2002. In the last two decades of the 20th century China stood out as the world's star performer in economic growth thanks to the market oriented reform that started in 1978. At the turn of the century the Chinese economy faces a series of challenges to sustain its growth and stability. The two decade long rapid growth has effectively strengthened China's economic power and raised its people's standard of living. It has also transformed China from a centrally planned command economy into a socialist market economy (SOC) which operates increasingly in line with capitalist norms. Major structural problems however remain and are growing acute. Weakness in the fiscal system breeds rent seeking at the local level and causes tension in the state budget. The flawed financial institutions and the biased ownership

structure continue to distort resource allocation and cause huge efficiency losses Inter provincial and inter regional disparity is reaching a level that threatens national unity and social stability As China joins the World Trade Organization and becomes more integrated into the world economy it urgently needs to improve the domestic business environment and to beef up indigenous industries for foreign competition This volume is a collection of papers written by scholars at the East Asian Institute to address those problems during the period 1999-2001 The authors with their knowledge and experience in China studies provide in depth observations and professional analyses of some of the most important issues for the Chinese economy at the turn of the century Some of the observations and analyses lead to enlightening policy recommendations The solid scholarship combined with the policy orientation of these papers will appeal greatly to researchers in academia governments and other institutions The policy oriented and fact based analyses will also be of interest to practitioners in business including business consultants
