Machine Learning in Medicine - Cookbook Three Ton J. Cleophas, Aeilko H. Zwinderman, 2014-10-29 Unique features of the book involve the following

- 1 This book is the third volume of a three volume series of cookbooks entitled Machine Learning in Medicine Cookbooks One Two and Three No other self assessment works for the medical and health care community covering the field of machine learning have been published to date
- 2 Each chapter of the book can be studied without the need to consult other chapters and can for the readership s convenience be downloaded from the internet Self assessment examples are available at extras.springer.com
- 3 An adequate command of machine learning methodologies is a requirement for physicians and other health workers particularly now because the amount of medical computer data files currently doubles every 20 months and because soon it will be impossible for them to take proper data based health decisions without the help of machine learning
- 4 Given the importance of knowledge of machine learning in the medical and health care community and the current lack of knowledge of it the readership will consist of any physician and health worker
- 5 The book was written in a simple language in order to enhance readability not only for the advanced but also for the novices
- 6 The book is multipurpose it is an introduction for ignorant a primer for the inexperienced and a self assessment handbook for the advanced
- 7 The book was particularly written for jaded physicians and any other health care professionals lacking time to read the entire series of three textbooks
- 8 Like the other two cookbooks it contains technical descriptions and self assessment examples of 20 important computer methodologies for medical data analysis and it largely skips the theoretical and mathematical background
- 9 Information of theoretical and mathematical background of the methods described are displayed in a notes section at the end of each chapter
- 10 Unlike traditional statistical methods the machine learning methodologies are able to analyze big data including thousands of cases and hundreds of variables
- 11 The medical and health care community is little aware of the multidimensional nature of current medical data files and experimental clinical studies are not helpful to that aim either because these studies usually assume that subgroup characteristics are unimportant as long as the study is randomized This is of course untrue because any subgroup characteristic may be vital to an individual at risk
- 12 To date except for a three volume introductory series on the subject entitled Machine Learning in Medicine Part One Two and Three 2013 Springer Heidelberg Germany from the same authors and the current cookbook series no books on machine learning in medicine have been published
- 13 Another unique feature of the cookbooks is that it was jointly written by two authors from different disciplines one being a clinician clinical pharmacologist one being a mathematician biostatistician
- 14 The authors have also

jointly been teaching at universities and institutions throughout Europe and the USA for the past 20 years 15 The authors have managed to cover the field of medical data analysis in a nonmathematical way for the benefit of medical and health workers 16 The authors already successfully published many statistics textbooks and self assessment books e g the 67 chapter textbook entitled Statistics Applied to Clinical Studies 5th Edition 2012 Springer Heidelberg Germany with downloads of 62 826 copies 17 The current cookbook makes use in addition to SPSS statistical software of various free calculators from the internet as well as the Konstanz Information Miner Knime a widely approved free machine learning package and the free Weka Data Mining package from New Zealand 18 The above software packages with hundreds of nodes the basic processing units including virtually all of the statistical and data mining methods can be used not only for data analyses but also for appropriate data storage 19 The current cookbook shows particularly for those with little affinity to value tables that data mining in the form of a visualization process is very well feasible and often more revealing than traditional statistics 20 The Knime and Weka data miners uses widely available excel data files 21 In current clinical research prospective cohort studies are increasingly replacing the costly controlled clinical trials and modern machine learning methodologies like probit and tobit regressions as well as neural networks Bayesian networks and support vector machines prove to better fit their analysis than traditional statistical methods do 22 The current cookbook not only includes concise descriptions of standard machine learning methods but also of more recent methods like the linear machine learning models using ordinal and loglinear regression 23 Machine learning tends to increasingly use evolutionary operation methodologies Also this subject has been covered 24 All of the methods described have been applied in the authors own research prior to this publication
