A Classical Invitation To Algebraic Numbers And Class Fields:

A Classical Invitation to Algebraic Numbers and Class Fields Harvey Cohn, 2012-12-06 Artin's 1932 Göttingen Lectures on Class Field Theory and Connections between Algebraic Number Theory and Integral Matrices *A Classical Invitation to Algebraic Numbers and Class Fields* Harvey Cohn, 1988 *A Classical Invitation to Algebraic Numbers and Class Fields* Artin's 1932 Göttingen Lectures on Class Field Theory Harvey Cohn, 1978 *An Invitation To Algebraic Numbers And Algebraic Functions* Franz Halter-Koch, 2020-05-04 The author offers a thorough presentation of the classical theory of algebraic numbers and algebraic functions which both in its conception and in many details differs from the current literature on the subject. The basic features are Field theoretic preliminaries and a detailed presentation of Dedekind's ideal theory including non principal orders and various types of class groups, the classical theory of algebraic number fields with a focus on quadratic, cubic and cyclotomic fields, basics of the analytic theory including the prime ideal theorem, density results and the determination of the arithmetic by the class group, a thorough presentation of valuation theory including the theory of difference discriminants and higher ramification. The theory of function fields is based on the ideal and valuation theory developed before it presents the Riemann-Roch theorem on the basis of Weil differentials and highlights in detail the connection with classical differentials. The theory of congruence zeta functions and a proof of the Hasse-Weil theorem represent the culminating point of the volume. The volume is accessible with a basic knowledge in algebra and elementary number theory. It empowers the reader to follow the advanced number theoretic literature and is a solid basis for the study of the forthcoming volume on the foundations and main results of class field theory. Key features: A thorough presentation of the theory of Algebraic Numbers and Algebraic Functions on an ideal and valuation theoretic basis. Several of the topics both in the number field and in the function field case were not presented before in this context. Despite presenting many advanced topics, the text is easily readable. Franz Halter-Koch is professor emeritus at the university of Graz. He is the author of *Ideal Systems* Marcel Dekker 1998, *Quadratic Irrationals* CRC 2013 and a co author of *Non Unique Factorizations* CRC 2006.

Introduction to the Construction of Class Fields Harvey Cohn,1994-01-01 A broad introduction to quadratic forms modular functions interpretation by rings and ideals class fields by radicals and more 1985 ed Primes of the Form x^2+ny^2 : Fermat, Class Field Theory, and Complex Multiplication. Third Edition with Solutions David A. Cox,2022-11-16 This book studies when a prime p can be written in the form x^2+ny^2 It begins at an elementary level with results of Fermat and Euler and then discusses the work of Lagrange Legendre and Gauss on quadratic reciprocity and the genus theory of quadratic forms After exploring cubic and biquadratic reciprocity the pace quickens with the introduction of algebraic number fields and class field theory This leads to the concept of ring class field and a complete but abstract solution of $p \mid x^2+ny^2$ To make things more concrete the book introduces complex multiplication and modular functions to give a constructive solution The book ends with a discussion of elliptic curves and Shimura reciprocity Along the way the reader will encounter some compelling history and marvelous formulas together with a complete solution of the class number one problem for imaginary quadratic fields The book is accessible to readers with modest backgrounds in number theory In the third edition the numerous exercises have been thoroughly checked and revised and as a special feature complete solutions are included This makes the book especially attractive to readers who want to get an active knowledge of this wonderful part of mathematics
