A Systems Analysis Of The Global Boreal Forest:

A Systems Analysis of the Global Boreal Forest Herman H. Shugart, Rik Leemans, Gordon B. Bonan, 2010-01-12 The boreal forests of the world geographically situated to the south of the Arctic and generally north of latitude 50 degrees are considered to be one of the earth's most significant terrestrial ecosystems in terms of their potential for interaction with other global scale systems such as climate and anthropogenic activity This book developed by an international panel of ecologists provides a synthesis of the important patterns and processes which occur in boreal forests and reviews the principal mechanisms which control the forests pattern in space and time The effects of cold temperatures soil ice insects plant competition wildfires and climatic change on the boreal forests are discussed as a basis for the development of the first global scale computer model of the dynamical change of a biome able to project the change of the boreal forest over timescales of decades to millennia and over the global extent of this forest

A Systems Analysis of the Global Boreal Forest Herman H. Shugart, Rik Leemans, Gordon B. Bonan, 2005-03-07 The world's boreal forests which lie to the south of the Arctic are considered to be the Earth's most significant terrestrial ecosystems A panel of ecologists here provide a synthesis of the important patterns and processes which occur in boreal forests and review the principal mechanisms which control the forest's patterns

Managing Boreal Forests in the Context of Climate Change Seppo Kellomaki, 2017-02-03 In many places in the world forests dominate landscapes and provide various products Future climate change could profoundly alter the productivity of forest ecosystems and species composition Until now climate impact research has primarily focused on the likely impacts of rise in temperature increased atmospheric CO₂ concentration and varying precipitation on unmanaged forests The issue that now needs to be addressed is how to sustainably manage climate change for timber production and biomass Though climate change is a global issue impacts on forests depend on local environmental conditions and management methods so this book will look at the issue under varying local contexts

A Systems Approach to the Environmental Analysis of Pollution Minimization Sven E. Jorgensen, 2020-01-29 The environmental analysis of pollution problems always involves the use of mass and energy balances to quantify the extent of pollution and its sources This same form of analysis can be applied to ecosystems production systems a whole country or a region A Systems Approach to the Environmental Analysis of Pollution Minimization identifies and describes the common factors shared by these systems The book is organized in twelve chapters and progresses from general concepts to specific assessment methods Chapter one is a general introduction to environmental management principles Chapter two discusses conservation principles and their applications to environmental health Chapters three and four explore ecosystem health properties and analysis Chapters five through eleven present different methods of analysis including Green Accounting Clean Technology Life Cycle Analysis and Risk Assessment Editor Sven Jorgensen closes the book with a sweeping summary Jorgensen is a internationally published authority on the use and analysis of ecosystem models His new book is a comprehensive guide for both students and

professionals A Systems Approach to the Environmental Analysis of Pollution Minimization is an invaluable contribution

Features *Greenhouse Gas Emissions - Fluxes and Processes* A. Tremblay, 2005 This is the first book to provide measurements of greenhouse gases from both aquatic and terrestrial environments as well as from hydroelectric reservoirs This monograph not only presents the state of the art techniques for measuring the emissions of greenhouse gases but also demonstrates the mechanisms or processes leading to the emissions of greenhouse gases It offers the reader a synthesis of what we understand of GHG emission after 12 years of research in boreal ecosystems the estimations of gross and net emissions from hydroelectric reservoirs the impact of hydroelectric reservoirs on climate change as well as a comparison of the different alternatives for producing energy in relation to GHG emissions **Road from Kyoto** United States. Congress. House. Committee on Science, 1999

Ecological Bulletins, Targets and Tools for the Maintenance of Forest Biodiversity Per Angelstam, Monica Donz-Breuss, Jean-Michel Roberge, 2009-05-06 Maintaining forest biodiversity by combining protection management and restoration of forest and woodland landscapes is a central component of sustainable development Evidence that there are threshold levels for how much habitat loss may be tolerated for viable populations of specialised species to be maintained Policy makers businesses and managers pose questions about how to balance use of renewable forest resources and conserve biodiversity Examples are presented on how biodiversity assessments can be made Proposes how the critical gaps in our knowledge identified throughout the book could be filled through macroecological research and international co operation

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation

Past and Future Rapid Environmental Changes Brian Huntley, Wolfgang Cramer, Alan V. Morgan, Honor C.

Prentice, Judy R.M. Allen, 2013-06-29 Numerous experts including ecologists geneticists paleontologists and climatologists investigate the response of terrestrial organisms to changes in their environment The volume comprises an introductory and a final chapter by the editors as well as another 35 contributions These are divided into six sections 1 past environmental changes the late Quaternary 2 spatial responses to past changes 3 mechanisms enabling spatial responses 4 evolutionary responses to past changes 5 mechanisms enabling evolutionary responses 6 predicted future environmental changes and simulated responses The overwhelming and unanimous conclusion of all contributors is that forecasted global environmental changes pose a severe threat to the integrity of ecosystems worldwide and to the survival of at least some species

Ecology of a Managed Terrestrial Landscape Ajith H. Perera, David L. Euler, Ian D. Thompson, 2011-11-01 The growing popularity of the broad landscape scale approach to forest management represents a dramatic shift from the traditional stand based focus on timber production *Ecology of a Managed Terrestrial Landscape* responds to the increasing need of forest policy developers planners and managers for an integrated comprehensive perspective on ecological landscapes The book examines the big picture of ecological patterns and processes through a case study of the vast managed forest region in Ontario The contributors synthesize current landscape ecological knowledge of this area and look at gaps and future research directions from several points of view spatial patterns ecological functions and processes natural disturbances and ecological responses to disturbance They also discuss the integration of landscape ecological knowledge into policies of forest management policies particularly with respect to Ontario's legislative goals of forest sustainability *Ecology of a Managed Terrestrial Landscape* is the first book to describe the landscape ecology of a continuously forested landscape in a comprehensive manner It is written for instructors and students in forest management wildlife ecology and landscape ecology and for forest managers planners and policy developers in North America
