Beamtimes And Lifetimes The World Of High Energy Physicists:

Beamtimes and Lifetimes Sharon Traweek, 2009-06-30 The unique breed of particle physicists constitutes a community of sophisticated mythmakers explicators of the nature of matter who forever alter our views of space and time But who are these people What is their world really like Sharon Traweek a bold and original observer of culture opens the door to this unusual domain and offers us a glimpse into the inner sanctum

Domesticity in the Making of Modern Science Donald L. Opitz, Staffan Bergwik, Brigitte Van Tiggelen, 2016-01-26 The history of the modern sciences has long overlooked the significance of domesticity as a physical social and symbolic force in the shaping of knowledge production This book provides a welcome reorientation to our understanding of the making of the modern sciences globally by emphasizing the centrality of domesticity in diverse scientific enterprises

Imperial Technoscience Amit Prasad, 2014-03-14 A study of science and technology practices that shows how even emergent aspects of research and development remain entangled with established hierarchies In the last four decades during which magnetic resonance imaging MRI has emerged as a cutting edge medical technology and a cultural icon technoscientific imaginaries and practices have undergone a profound change across the globe Shifting transnational geography of technoscientific innovations is making commonly deployed Euro West centric divides such as west versus non west or innovating north versus non innovating south increasingly untenable the world is indeed becoming flatter Nevertheless such dualist divides which are intimately tied to other dualist categories that have been used to describe scientific knowledge and practice continue to undergird analyses and imaginaries of transnational technoscience Imperial Technoscience puts into broad relief the ambivalent and contradictory folding of Euro west centrism with emergent features of technoscience It argues Euro West centric historicism and resulting over determinations not only hide the vibrant albeit hierarchical transnational histories of technoscience but also tell us little about shifting geography of technoscientific innovations The book utilizes a deconstructive empirical approach to explore entangled histories of MRI across disciplines physics chemistry medicine etc institutions university hospitals industry etc and nations United States Britain and India Entangled histories of MRI it shows better explain emergence and consolidation of particular technoscientific trajectories and shifts in transnational geography of science and technology e g centers and peripheries

Naked Science Laura Nader, 2014-01-02 Naked Science is about contested domains and includes different science cultures physics molecular biology primatology immunology ecology medical environmental mathematical and navigational domains While the volume rests on the assumption that science is not autonomous the book is distinguished by its global perspective Examining knowledge systems within a planetary frame forces thinking about boundaries that silence or affect knowledge building Consideration of ethnoscience and technoscience research within a common framework is overdue for raising questions about deeply held beliefs and assumptions we all carry about scientific knowledge We need a perspective on how to regard different science traditions because public controversies should not be about a glorified science or a

despicable science *Doctoral Education: Research-Based Strategies for Doctoral Students, Supervisors and Administrators* Lynn McAlpine, Cheryl Amundsen, 2011-02-16 The quality of the academics who undertake the work of teaching and research is critical to the significance status and relevance of our universities There is widespread evidence that doctoral students are not being properly prepared for the changing face of higher education and that once they take up academic positions they often experience many frustrations and tensions This book based on a four year long research program conducted by four academics and four graduate students investigates the experiences of doctoral students new academics and senior academics as they engage in their work related to doctoral education *Doctoral Education Research Based Strategies for Doctoral Students Supervisors and Administrators* offers research based strategies for improving doctoral education in a non technical and conversational way Those strategies include learning to be a new supervisor alongside other academic work developing an intellectual network during the doctoral journey giving and receiving feedback on scholarly writing and preparing for the oral defence Also based on research evidence the book challenges taken for granted practices and policies surrounding doctoral education including the gendered nature of disciplinary practices the paradox of writing in doctoral education and the public oversight of more and more aspects of academic work Intended for doctoral students academics staff and administrators this book provides several perspectives on the topic of doctoral education and contains the actual voices of doctoral students and new academics to illustrate its discussion **Encyclopedia of Literature and Science** Pamela

Gossin, 2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they are different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief bibliography The entire volume closes with a list of works for further reading

Feminism, Science, and the Philosophy of Science J. Nelson, 2012-12-06 Feminism Science and the Philosophy of Science brings together original essays by both feminist and mainstream philosophers of science that examine issues at the intersections of feminism science and the philosophy of science Contributors explore parallels and tensions between feminist

approaches to science and other approaches in the philosophy of science and more general science studies In so doing they explore notions at the heart of the philosophy of science including the nature of objectivity truth evidence cognitive agency scientific method and the relationship between science and values **Spooky Action at a Distance** George

Musser,2015-11-03 Long listed for the 2016 PEN E O Wilson Literary Science Writing Award Delightfully readable Spooky Action at a Distance is a mind bending voyage to the frontiers of modern physics that will change the way we think about reality What is space It isn't a question that most of us normally ask Space is the venue of physics it's where things exist where they move and take shape Yet over the past few decades physicists have discovered a phenomenon that operates outside the confines of space and time nonlocality the ability of two particles to act in harmony no matter how far apart they may be It appears to be almost magical Einstein grappled with this oddity and couldn't come to terms with it describing it as spooky action at a distance More recently the mystery has deepened as other forms of nonlocality have been uncovered This strange occurrence which has direct connections to black holes particle collisions and even the workings of gravity holds the potential to undermine our most basic understandings of physical reality If space isn't what we thought it was then what is it In Spooky Action at a Distance George Musser sets out to answer that question offering a provocative exploration of nonlocality and a celebration of the scientists who are trying to explain it Musser guides us on an epic journey into the lives of experimental physicists observing particles acting in tandem astronomers finding galaxies that look statistically identical and cosmologists hoping to unravel the paradoxes surrounding the big bang He traces the often contentious debates over nonlocality through major discoveries and disruptions of the twentieth century and shows how scientists faced with the same undisputed experimental evidence develop wildly different explanations for that evidence Their conclusions challenge our understanding of not only space and time but also the origins of the universe and they suggest a new grand unified theory of physics An important book that provides insight into key new developments in our understanding of the nature of space time and the universe It will repay careful study John Gribbin The Wall Street Journal An endlessly surprising foray into the current mother of physics many knotty mysteries the solving of which may unveil the weirdness of quantum particles black holes and the essential unity of nature Kirkus Reviews starred review Science, History and Social Activism Garland E.

Allen,Roy M. MacLeod,2013-03-14 To earn a degree every doctoral candidate should go out to Harvard Square find an audience and explain his or her dissertation Everett Mendelsohn's worldly advice to successive generations of students whether apocryphal or real has for over forty years spoken both to the essence of his scholarship and to the role of the scholar Possibly no one has done more to establish the history of the life sciences as a recognized university discipline in the United States and to inspire a critical concern for the ways in which science and technology operate as central features of Western society This book is both an act of homage and of commemoration to Professor Mendelsohn on his 70th birthday As befits its subject the work it presents is original comparative wide ranging and new Since 1960 Everett Mendelsohn has been

identified with Harvard University and with its Department of the History of Science Those that know him as a teacher will also know him as a scholar In 1968 he began and after 30 years has just bequeathed to others the editorship of the Journal of the History of Biology among the earliest and one of the most important publications in its field At the same time he has been a pioneer in the social history and sociology of science He has formed particularly close working relationships with colleagues in Sweden and Germany as witnessed by his editorial presence in the Sociology of Science Yearbook Genius James Gleick, 1993-11-02 To his colleagues Richard Feynman was not so much a genius as he was a full blown magician someone who does things that nobody else could do and that seem completely unexpected The path he cleared for twentieth century physics led from the making of the atomic bomb to a Nobel Prize winning theory of quantum electrodynamics to his devastating expos of the Challenger space shuttle disaster At the same time the ebullient Feynman established a reputation as an eccentric showman a master safe cracker and bongo player and a wizard of seduction Now James Gleick author of the bestselling Chaos unravels the dense skein of Feynman's thought as well as the paradoxes of his character in a biography which was nominated for a National Book Award of outstanding lucidity and compassion
