

The background of the slide is an aerial photograph of a coastal region. It shows a large body of water, likely a bay or estuary, with various channels and inlets. The land is visible as darker, more textured areas interspersed with the water. The overall tone is somewhat desaturated, with a mix of blues, greys, and browns.

THE BATTLE FOR RESOURCES IN BOSTON & OAKLAND

Bay Cities And Water Politics

Ellen Hanak

Bay Cities And Water Politics:

Bay Cities and Water Politics Sarah S. Elkind, 1998 Combining insights from urban western and environmental history Elkind examines the ways that people's reactions to their natural surroundings drive both demand for improved public services and political reform She traces public works development in the Gilded Age and Progressive Era to explain how these programs united each city with its suburban neighbors creating new political entities and allowing Boston and Oakland to appropriate rural resources and thus overcome the environmental limits to their continued growth and prosperity She also shows how when the power of regionalism is turned to urban development environmental and social costs are sometimes overlooked

Remaking Boston Anthony N. Penna, Conrad E. Wright, 2009-12-26 Since its settlement in 1630 Boston its harbor and outlying regions have witnessed a monumental transformation at the hands of humans and by nature Remaking Boston chronicles many of the events that altered the physical landscape of Boston while also offering multidisciplinary perspectives on the environmental history of one of America's oldest and largest metropolitan areas Situated on an isthmus and blessed with a natural deepwater harbor and ocean access Boston became an important early trade hub with Europe and the world As its population and economy grew developers extended the city's shoreline into the surrounding tidal mudflats to create more useable land Further expansion of the city was achieved through the annexation of surrounding communities and the burgeoning population and economy spread to outlying areas The interconnection of city and suburb opened the floodgates to increased commerce services and workforces while also leaving a wake of roads rails bridges buildings deforestation and pollution Profiling this ever changing environment the contributors tackle a variety of topics including the glacial formation of the region physical characteristics and composition of the land and harbor dredging sea walling flattening and landfill operations in the reshaping of the Shawmut Peninsula the longstanding controversy over the link between landfills and shoaling in shipping channels population movements between the city and suburbs and their environmental implications interdependence of the city and its suburbs preservation and reclamation of the Charles River suburban deforestation and later reforestation as byproducts of changing land use the planned outlay of parks and parkways and historic climate changes and the human and biological adaptations to them

Empire of Water David Soll, 2013-03-26 Supplying water to millions is not simply an engineering and logistical challenge As David Soll shows in his finely observed history of the nation's largest municipal water system the task of providing water to New Yorkers transformed the natural and built environment of the city its suburbs and distant rural watersheds Almost as soon as New York City completed its first municipal water system in 1842 it began to expand the network eventually reaching far into the Catskill Mountains more than one hundred miles from the city Empire of Water explores the history of New York City's water system from the late nineteenth century to the early twenty first century focusing on the geographical environmental and political repercussions of the city's search for more water Soll vividly recounts the profound environmental implications for both city and

countryside Some of the region's most prominent landmarks such as the High Bridge across the Harlem River Central Park's Great Lawn and the Ashokan Reservoir in Ulster County have their origins in the city's water system By tracing the evolution of the city's water conservation efforts and watershed management regime Soll reveals the tremendous shifts in environmental practices and consciousness that occurred during the twentieth century Few episodes better capture the long standing upstate downstate divide in New York than the story of how mountain water came to flow from spigots in Brooklyn and Manhattan Soll concludes by focusing on the landmark watershed protection agreement signed in 1997 between the city watershed residents environmental organizations and the state and federal governments After decades of rancor between the city and Catskill residents the two sides set aside their differences to forge a new model of environmental stewardship His account of this unlikely environmental success story offers a behind the scenes perspective on the nation's most ambitious and wide ranging watershed protection program

Where Minds and Matters Meet Volker Janssen, Amy Bix, Linda Nash, 2012-12-12 The American West where such landmarks as the Golden Gate Bridge rival wild landscapes in popularity and iconic significance has been viewed as a frontier of technological innovation Where Minds and Matters Meet calls attention to the convergence of Western history and the history of technology showing that the region's politics and culture have shaped seemingly placeless global technological practices and institutions Drawing on political and social history as well as art history the book's essays take the cultural measure of the region's great technological milestones including San Diego's Panama California Exposition the building of the Hetch Hetchy Dam in the Sierras and traffic planning in Los Angeles Contributors Amy Bix Louise Nelson Dyble Patrick McCray Linda Nash Peter Neushul Matthew W Roth Bruce Sinclair L Chase Smith Carlene Stephens Aristotle Tympas Jason Weems Peter Westwick Stephanie Young

The Urban Origins of Suburban Autonomy Richardson Dilworth, 2005-02-28 Using the urbanized area that spreads across northern New Jersey and around New York City as a case study this book presents a convincing explanation of metropolitan fragmentation the process by which suburban communities remain as is or break off and form separate political entities The process has important and deleterious consequences for a range of urban issues including the weakening of public finance and school integration The explanation centers on the independent effect of urban infrastructure specifically sewers roads waterworks gas and electricity networks The book argues that the development of such infrastructure in the late nineteenth century not only permitted cities to expand by annexing adjacent municipalities but also further enhanced the ability of these suburban entities to remain or break away and form independent municipalities The process was crucial in creating a proliferation of municipalities within metropolitan regions The book thus shows that the roots of the urban crisis can be found in the interplay between technology politics and public works in the American city
