Bayesian Forecasting And Dynamic Models:

Bayesian Forecasting and Dynamic Models Mike West, Jeff Harrison, 2013-06-29 In this book we are concerned with Bayesian learning and forecasting in dynamic environments We describe the structure and theory of classes of dynamic models and their uses in Bayesian forecasting The principles models and methods of Bayesian forecasting have been developed extensively during the last twenty years This development has involved thorough investigation of mathematical and statistical aspects of forecasting models and related techniques With this has come experience with application in a variety of areas in commercial and industrial scientific and socio economic fields Indeed much of the technical development has been driven by the needs of forecasting practitioners As a result there now exists a relatively complete statistical and mathematical framework although much of this is either not properly documented or not easily accessible Our primary goals in writing this book have been to present our view of this approach to modelling and forecasting and to provide a reasonably complete text for advanced university students and research workers The text is primarily intended for advanced undergraduate and postgraduate students in statistics and mathematics In line with this objective we present thorough discussion of mathematical and statistical features of Bayesian analyses of dynamic models with illustrations examples and exercises in each Chapter

Bayesian Forecasting of Multinomial Time Series Through Conditionally Gaussian Dynamic Models Claudia Cargnoni, Peter Müller, Mike West, 1995

Bayesian Inference of State Space Models Kostas Triantafyllopoulos, 2021-11-12

Bayesian Inference of State Space Models Kalman Filtering and Beyond offers a comprehensive introduction to Bayesian estimation and forecasting for state space models The celebrated Kalman filter with its numerous extensions takes centre stage in the book Univariate and multivariate models linear Gaussian non linear and non Gaussian models are discussed with applications to signal processing environmetrics economics and systems engineering Over the past years there has been a growing literature on Bayesian inference of state space models focusing on multivariate models as well as on non linear and non Gaussian models The availability of time series data in many fields of science and industry on the one hand and the development of low cost computational capabilities on the other have resulted in a wealth of statistical methods aimed at parameter estimation and forecasting This book brings together many of these methods presenting an accessible and comprehensive introduction to state space models A number of data sets from different disciplines are used to illustrate the methods and show how they are applied in practice The R package BTSA created for the book includes many of the algorithms and examples presented The book is essentially self contained and includes a chapter summarising the prerequisites in undergraduate linear algebra probability and statistics An up to date and complete account of state space methods illustrated by real life data sets and R code this textbook will appeal to a wide range of students and scientists notably in the disciplines of statistics systems engineering signal processing data science finance and econometrics With numerous exercises in each chapter and prerequisite knowledge conveniently recalled it is suitable for upper undergraduate and graduate courses

Bayesian Statistical Modelling Peter Congdon, 2007-04-04

Bayesian methods combine the evidence from the data at hand with previous quantitative knowledge to analyse practical problems in a wide range of areas The calculations were previously complex but it is now possible to routinely apply Bayesian methods due to advances in computing technology and the use of new sampling methods for estimating parameters Such developments together with the availability of freeware such as WINBUGS and R have facilitated a rapid growth in the use of Bayesian methods allowing their application in many scientific disciplines including applied statistics public health research medical science the social sciences and economics Following the success of the first edition this reworked and updated book provides an accessible approach to Bayesian computing and analysis with an emphasis on the principles of prior selection identification and the interpretation of real data sets The second edition Provides an integrated presentation of theory examples applications and computer algorithms Discusses the role of Markov Chain Monte

Carlo methods in computing and estimation Includes a wide range of interdisciplinary applications and a large selection of worked examples from the health and social sciences Features a comprehensive range of methodologies and modelling techniques and examines model fitting in practice using Bayesian principles Provides exercises designed to help reinforce the reader's knowledge and a supplementary website containing data sets and relevant programs Bayesian Statistical Modelling is ideal for researchers in applied statistics medical science public health and the social sciences who will benefit greatly from the examples and applications featured The book will also appeal to graduate students of applied statistics data analysis and Bayesian methods and will provide a great source of reference for both researchers and students Praise for the First Edition It is a remarkable achievement to have carried out such a range of analysis on such a range of data sets I found this book comprehensive and stimulating and was thoroughly impressed with both the depth and the range of the discussions it contains ISI Short Book Reviews This is an excellent introductory book on Bayesian modelling techniques and data analysis Biometrics The book fills an important niche in the statistical literature and should be a very valuable resource for students and professionals who are utilizing Bayesian methods Journal of Mathematical Psychology *Sequential Monte Carlo Methods in Practice* Arnaud Doucet, Nando de Freitas, Neil Gordon, 2013-03-09 Monte Carlo methods are revolutionising the on line analysis of data in fields as diverse as financial modelling target tracking and computer vision These methods appearing under the names of bootstrap filters condensation optimal Monte Carlo filters particle filters and survival of the fittest have made it possible to solve numerically many complex non standard problems that were previously intractable This book presents the first comprehensive treatment of these techniques including convergence results and applications to tracking guidance automated target recognition aircraft navigation robot navigation econometrics financial modelling neural networks optimal control optimal filtering communications reinforcement learning signal enhancement model averaging and selection computer vision semiconductor design population biology dynamic Bayesian networks and time series analysis This will be of great value to students researchers and practitioners who have some basic knowledge of probability Arnaud Doucet received the Ph D degree from the University of Paris XI Orsay in 1997 From 1998 to 2000 he conducted research at the Signal Processing Group of Cambridge University UK He is currently an assistant professor at the Department of Electrical Engineering of Melbourne University Australia His research interests include Bayesian statistics dynamic models and Monte Carlo methods Nando de Freitas obtained a Ph D degree in information engineering from Cambridge University in 1999 He is presently a research associate with the artificial intelligence group of the University of California at Berkeley His main research interests are in Bayesian statistics and the application of on line and batch Monte Carlo methods to machine learning **Nonlinear Time Series Analysis** Ruey S. approaches to nonlinear time series analysis The authors noted experts in the field explore the advantages and limitations of the nonlinear models and methods and review the improvements upon linear time series models The need for this book is based on the recent developments in nonlinear time series analysis statistical learning dynamic systems and advanced computational methods Parametric and nonparametric methods and nonlinear and non Gaussian state space models provide a much wider range of tools for time series analysis In addition advances in computing and data collection have made available large data sets and high frequency data These new data make it not only feasible but also necessary to take into consideration the nonlinearity embedded in most real world time series This vital guide Offers research developed by leading scholars of time series analysis Presents R commands making it possible to reproduce all the analyses included in the text Contains real world examples throughout the book Recommends exercises to test understanding of material presented Includes an instructor solutions manual and companion website Written for students researchers and practitioners who are interested in exploring nonlinearity in time series Nonlinear Time Series Analysis offers a comprehensive text that explores the advantages and limitations of the nonlinear models and methods and demonstrates the improvements upon linear time series models

Models for Ecological Data James S. Clark, 2020-10-06 The environmental sciences are undergoing a revolution in the use of models and data Facing ecological data sets of unprecedented size and complexity environmental scientists are struggling to understand and exploit powerful new statistical tools for making sense of ecological processes In Models for Ecological Data James Clark introduces ecologists to these modern methods in modeling and computation Assuming only basic courses in calculus and statistics the text introduces readers to basic maximum likelihood and then works up to more advanced topics in Bayesian modeling and computation Clark covers both classical statistical approaches and powerful new computational tools and describes how complexity can motivate a shift from classical to Bayesian methods Through an available lab manual the book introduces readers to the practical work of data modeling and computation in the language R Based on a successful course at Duke University and National Science Foundation funded institutes on hierarchical modeling Models for Ecological Data will enable ecologists and other environmental scientists to develop useful models that make sense of ecological data Consistent treatment from classical to modern Bayes Underlying distribution theory to algorithm development Many examples and applications Does not assume statistical background Extensive supporting appendixes Lab manual in R is available separately
