Beam Weapons The Next Arms Race:

Beam Weapons Jeff Hecht, 1984-03-31 *Beam Weapons* examines the directed energy weapons that became a central part of the Reagan Administration's Strategic Defense Initiative better known as Star Wars. First published in 1984 it describes the science and technology behind directed energy weapons the state of the art at the time Reagan launched the program and the military issues involved. The first full length book published on the topic it exhaustively documents the technical and military realities and uncertainties.

Beam Weapons Jeff Hecht, 2013-11-11 I first wrote about laser weapons in 1976 in an article that was published in the October 1977 issue of *Analog Science Fiction*. The article was fact but a science fiction magazine seemed an appropriate place for it then. Now that the President of the United States can talk about beam weapons in deadly serious tones on national television it seems time for a more serious look. This book is based on my analysis of information I've gathered in years of writing about laser technology. I have never had a security clearance and though that limits the information I have been able to obtain it means that I can say things that otherwise would be replaced by deleted. I have been watching the field long enough to play fill in the blanks with censored government documents and to make reasonable guesses of what many of the deleted's originally said. There are no simple answers here just complex technical and defense issues that deserve careful study and that are important to the future of our nation and the world. The defense issues raised in the latter half of the book may seem more immediate to the general reader but they are inevitably related to the technological background laid in Chapters 4-9. Throughout the book I have documented my sources as much as possible while respecting the confidentiality of information given in private.

Future Survey Annual 1985 Michael Marien, 1987-01-01 *Professional Journal of the United States Army*, 1984 *Quarterly Review of Military Literature*, 1984 **Military Review**, 1984 **Cardinal Choices**, 2000-09 This book is a history of the complex relations between scientific advisors primarily physicists and U.S. presidents in their role as decision makers about nuclear weapons and military strategy. The story unsurprisingly is one of considerable tension between the experts and the politicians as scientists seek to influence policy and presidents alternate between accepting their advice and resisting or even ignoring it. First published in 1992 the book has been brought up to date to include the experiences of science advisors to President Clinton. In addition the texts of eleven crucial documents from the Einstein Szilard letter to President Roosevelt 1939 to the announcement of the Strategic Defense Initiative by President Reagan 1983 have been added as appendixes.

Military Laser Technology and Systems David H. Titterton, 2015-03-01 This new resource provides an insight into the physical principles of the device technology that underpins many laser based military systems in one form or another. From this knowledge a deeper understanding of the fundamental requirements and the potential performance as well as limitations of such systems may be assessed given the appropriate operational parameters. Engineers and students are provided with practical advice on how to evaluate laser devices and systems operate them safely and train with them.

Original Sin

Bleddyn E. Bowen, 2023-01-01 Space technology was developed to enhance the killing power of the state. The Moon landings and the launch of the Space Shuttle were mere sideshows drawing public attention away from the real goal: military and economic control of space as a source of power on Earth. Today, as Bleddyn E. Bowen vividly recounts, thousands of satellites work silently in the background to provide essential military intelligence and economic capabilities. No major power can do without them. Beyond Washington, Moscow, and Beijing, truly global technologies have evolved from the ground floor of the nuclear missile revolution to today's orbital battlefield, shaping the wars to come. World powers including India, Japan, and Europe are fully realizing the strategic benefits of commanding Earth's cosmic coastline as a stage for war, development, and prestige. Yet as new contenders spend more and more on outer space, there is scope for cautious optimism about the future of the Space Age if we can recognize rather than hide its original sin.

War at the Speed of Light Louis A. Del

Monte, 2021-03 *War at the Speed of Light* describes the revolutionary and ever-increasing role of directed energy weapons such as laser, microwave, electromagnetic pulse, and cyberspace weapons in warfare. Louis A. Del Monte delineates the threat that such weapons pose to disrupting the doctrine of Mutually Assured Destruction, which has kept the major powers of the world from engaging in nuclear warfare. Potential U.S. adversaries such as China and Russia are developing hypersonic missiles and using swarming tactics as a means to defeat the U.S. military. In response, the U.S. Department of Defense established the 2018 National Security Strategy, emphasizing directed energy weapons which project devastation at the speed of light and are capable of destroying hypersonic missiles and enemy drones and missile swarms. Del Monte analyzes how modern warfare is changing in three fundamental ways: the pace of war is quickening, the rate at which weapons project devastation is reaching the speed of light, and cyberspace is now officially a battlefield. In this acceleration of combat, called hyperwar, Del Monte shows how disturbingly close the world is to losing any deterrence to nuclear warfare.
