[The Great Ages of Discovery](#) Stephen J. Pyne, 2021-02-23 For more than 600 years Western civilization has relied on exploration to learn about a wider world and universe. The Great Ages of Discovery details the different eras of Western exploration in terms of its locations, its intellectual contexts, the characteristic moral conflicts that underwrote encounters, and the grand gestures that distill an age into its essence. Historian and MacArthur Fellow Stephen J. Pyne identifies three great ages of discovery in his fascinating new book. The first age of discovery ranged from the early 15th to the early 18th century, sketched out the contours of the globe aligned with the Renaissance, and had for its grandest expression the circumnavigation of the world ocean. The second age launched in the latter half of the 18th century, spanning into the early 20th century, carrying the Enlightenment along with it, pairing especially with settler societies, and had as its prize achievement the crossing of a continent. The third age began after World War II and pivoting from Antarctica pushed into the deep oceans and interplanetary space. Its grand gesture is Voyager's passage across the solar system. Each age had in common a galvanic rivalry: Spain and Portugal in the first age, Britain and France followed by others in the second, and the USSR and USA in the third. With a deep and passionate knowledge of the history of Western exploration, Pyne takes us on a journey across hundreds of years of geographic trekking. The Great Ages of Discovery is an interpretive companion to what became Western civilization's quest narrative, with the triumphs and tragedies that grand journey brought, the legacies of which are still very much with us. [Ice Age Earth](#) Alastair G. Dawson, 2013-06-17 Ice Age Earth provides the first detailed review of global environmental change in the Late Quaternary. Significant geological and climatic events are analysed within a review of

glacial and periglacial history The melting history of the last ice sheets reveals that complex dynamic and catastrophic change occurred change which affected the circulation of the atmosphere and oceans and the stability of the Earth's crust
