Air Water An Introduction To The Atmosphere:

Fluid Mechanics of Environmental Interfaces Carlo Gualtieri, Dragutin T. Mihailovic, 2012-11-21 Environmental Fluid Mechanics EFM studies the motion of air and water at several different scales the fate and transport of species carried along by these fluids and the interactions among those flows and geological biological and engineered systems EFM emerged some decades ago as a response to the need for tools to study problems of flow an

Environmental Organic Chemistry René P. Schwarzenbach, Philip M. Gschwend, Dieter M. Imboden, 2005-06-24 Environmental Organic Chemistry focuses on environmental factors that govern the processes that determine the fate of organic chemicals in natural and engineered systems The information discovered is then applied to quantitatively assessing the environmental behaviour of organic chemicals Now in its 2nd edition this book takes a more holistic view on physical chemical properties of organic compounds It includes new topics that address aspects of gas solid partitioning bioaccumulation and transformations in the atmosphere Structures chapters into basic and sophisticated sections Contains illustrative examples problems and case studies Examines the fundamental aspects of organic physical and inorganic chemistry applied to environmentally relevant problems Addresses problems and case studies in one volume

Free-surface Turbulence and Air-water Gas Exchange Sean Patrick McKenna, 2000 This thesis investigates the physical mechanisms of air water gas transfer through direct measurements of turbulence at the air water interface To enable this study a new approach to the particle image velocimetry PIV technique is developed in order to quantify free surface flows PIV measurements of free surface turbulence are performed with concurrent measurements of gas transfer in a specially constructed oscillating grid stirred tank for a range of turbulent mixing and surface conditions Surface turbulence vorticity divergence and gas transfer are all affected by the presence of a surface film with significant effects realized for relatively small surface pressures Results show that while a relationship between surface turbulence and the gas transfer velocity is an obvious improvement over that found using an estimate of the bulk flow turbulence this relationship is dependent on the flow regime However the data from the grid turbulence experiments and additional data from experiments with waves can be reconciled by a single relationship between the gas transfer velocity and the $1/2$ power of the surface divergence which agrees with previous conceptual models These results demonstrate the important role of surface divergence in air water gas exchange and relate in a physically meaningful way the interactions between surface renewal surfactants and gas transfer
