## **Agent Autonomy:**

**Agent Autonomy** Henry Hexmoor, Cristiano Castelfranchi, Rino Falcone, 2012-12-06 Autonomy is a characterizing notion of agents and intuitively it is rather unambiguous. The quality of autonomy is recognized when it is perceived or experienced yet it is difficult to limit autonomy in a definition. The desire to build agents that exhibit a satisfactory quality of autonomy includes agents that have a long life, are highly independent, can harmonize their goals and actions with humans and other agents, and are generally socially adept. Agent Autonomy is a collection of papers from leading international researchers that approximate human intuition, dispel false attributions, and point the way to scholarly thinking about autonomy. A wide array of issues about sharing control and initiative between humans and machines, as well as issues about peer level agent interaction, are addressed.

**Agents and Computational Autonomy** Matthias Nickles, Michael Rovatsos, Gerhard Weiß, 2004-08-05 This volume contains the postproceedings of the 1st International Workshop on Computational Autonomy Potential Risks Solutions AUTONOMY 2003 held at the 2nd International Joint Conference on Autonomous Agents and Multi agent Systems AAMAS 2003 July 14 2003 Melbourne Australia. Apart from revised versions of the accepted workshop papers, we have included invited contributions from leading experts in the field. With this, the present volume represents the first comprehensive survey of the state of the art of research on autonomy, capturing different theories of autonomy, perspectives on autonomy in different kinds of agent based systems, and practical approaches to dealing with agent autonomy. Agent orientation refers to a software development perspective that has evolved in the past 25 years in the fields of computational agents and multiagent systems. The basic notion underlying this perspective is that of a computational agent that is an entity whose behavior deserves to be called exible, social, and autonomous. As an autonomous entity, an agent possesses action choice and is at least to some extent capable of deciding and acting under self control. Through its emphasis on autonomy, agent orientation significantly differs from traditional engineering perspectives such as structure orientation or object orientation. These perspectives are targeted on the development of systems whose behavior is fully determined and controlled by external units, e.g. by a programmer at design time and/or a user at run time, and thus inherently fail to capture the notion of autonomy.

Agents and Ambient Intelligence Tibor Bosse, 2012 The concept of an intelligent agent a computational system capable of performing certain tasks autonomously derived from the growing potential of digital computers in the mid 20th century and had been widely adopted by the early 1990s Partly in parallel with this concept the perspective of ambient intelligence AmI emerged in the late 1990s Agent technology and AmI have many similarities and the main purpose of this book is to provide an overview of the state of the art of the scientific area that integrates these two The book addresses a wide variety of topics related to agents and AmI including theoretical practical design implementation ethical and philosophical issues The 12 chapters are arranged in four sections The first consists of three chapters discussing ethical and philosophical issues the second part explores various approaches that can be used to develop agent based AmI Systems the third part contains three chapters that share the goal

to endow AmI systems with useful properties like intelligence and adaptivity and the last section presents concrete applications of agent based AmI systems This book provides an insight into recent achievements and future challenges at the intersection of agent technology and ambient intelligence and will assist the development of more intelligent flexible effective and user friendly systems as well as posing critical questions about the future of the role of agents within the AmI perspective
