## All The Right Questions:

*The Right Questions* Phillip E. Johnson, 2009-09-20 An ECPA 2003 Gold Medallion Finalist Phillip E Johnson pries the lid off public debate about questions of ultimate concern questions often suppressed by our society's intellectual elite Moving far beyond matters of creation and evolution Johnson outlines the questions we all ought to be asking about the meaning of human history the limits of scientific inquiry religion and education in a pluralistic society truth liberty and moral choices and God and His Word Jesus Christ Johnson deftly demonstrates how the reigning naturalistic philosophy not only squelches public debate but also constrains us to ask the wrong questions Unless we start with the right questions Johnson argues our discussions will be framed by the assumptions of that very philosophy which must be challenged Johnson asserts that even the Christian church has much too often passively accepted this limiting frame of mind to the detriment of all But Christian faith and conviction instead ought to lead in opening up the search for truth and meaning through the kind of public education that teaches in controversy Then all of us will be prepared to engage in lively informed and civil debate about the questions that really matter Why is it always wrong to mix science and religion What is the ultimate premise the beginning point from which logic should proceed How can a college education prepare students to understand the ultimate purpose or meaning for which life should be lived and to choose rightly from among the available possibilities What is the appropriate understanding of religion in a pluralistic nation where substantial numbers of Christians agnostics Jews and Muslims all need to live together in peace How can democratic liberalism remain viable when severed from its Christian roots What is the most important event in human history Provocative personal persuasive and prophetic Johnson is certain to help us break free from our intellectual and spiritual captivity

web an open subset of the riemann surface for the multivalued function  $f(z) = \log z$  in mathematics particularly in complex analysis a riemann surface is a one dimensional complex manifold loosely speaking this means that any riemann surface is formed by gluing together open subsets of the complex plane  $\mathbb{C}$  using holomorphic gluing maps
