professionals will also benefit from information on food allergen control measures that have been put in place across the food chain

Food Allergies Roua Lajnaf, 2024-10-29 Much has been written about food allergies in scientific journals and in the lay press but Food Allergies Processing Technologies for Allergenicity Reduction approaches the issue of food allergies from an industrial processing rather than a clinical perspective Indeed industrial food processing technologies can have many beneficial effects to obtain various food products and to preserve foods from physical chemical and microbiological alterations However processing technologies including thermal and non thermal technologies can also alter the allergenic properties of food proteins This book provides an authoritative source of information on the relationship between food processing technologies and food allergens with a greater variety of studied allergens including peanuts tree nuts cow s milk eggs sesame lupine soy wheat mustard mushroom fish and shellfish as well as the importance of processing these when producing hypoallergenic foods Key Features Presents food allergies with recent advances and statistics concerning prevalence physiopathologic mechanism diagnosis and anaphylaxis Discusses food allergies in the food industry and investigates the effect of processing on allergenicity of foods during manufacturing Provides food processing and promising technologies to produce hypoallergenic food with high quality Covers the allergenic effect of different food additives with an investigation of cross reaction risks This unique book is an indispensable guide for allergic patients production managers scientists and nutritionists within the food industry as well as covering a range of critical topics in this area for all those concerned with understanding and managing food allergies

Food Allergens Tanja Ćirković Veličković, Marija Gavrović-Jankulović, 2014-06-24 A food allergen has the ability to first elicit an IgE response and then on subsequent exposures a clinical response to the same or similar protein How harmless food protein becomes recognized by the mucosal immune system as an allergen remains an open question and more data are needed to explain how regulatory mechanisms of the mucosal immune system fail and result in allergic sensitization to dietary antigens Some biochemical characteristics associated with food allergens such as the presence of multiple linear IgE binding epitopes and the resistance of the protein to digestion and processing seem to predominate among food allergens Digestion susceptibility of food allergens that sensitize via the gastrointestinal tract and stability to food processing conditions are inherently related to protein structural features Thereby physiological changes in the digestion process pathological conditions affecting digestion as well as procedures and food processing conditions that affect protein structure may all have a profound effect on the sensitizing potential and allergenicity of food proteins In addition signals coming from the diet and micro biome can modulate regulatory mechanisms of the mucosal immune system and influence mucosal immunity and intestinal barrier function The detection of allergenic ingredients in food products has received increased attention from the food industry and legislative and regulatory agencies over recent years This has resulted in the improvement of applied safety measures that provide protection for food allergic consumers and development of sensitive and highly specific analytical methods of food allergens detection Food

allergy is an important and common health issue and therefore there is a need to characterize the sensitizing potential of newly introduced proteins in genetically engineered foods A combination of in vitro and in silico methods provide information that contributes to safety assessment Suitable in vivo models may provide a more holistic assessment of allergenic potential of novel food proteins ALLERGIES Bruce S. Dobozin MD. & Stuart H. Young, 2011-07-16 Fifty million Americans suffer from allergies to certain foods pollens animal danders dust mites and other less common allergens Although the most common symptoms from watery eyes to hives are not life threatening there is a substantial cost in health care spending associated with these conditions Americans spent about 18 billion each year on asthma care in 2009 And of the 19 billion spent each year on over the counter remedies a substantial portion is spent on allergy medications Now two specialists in allergy medicine reveal how to manage allergies safely and effectively and live more comfortable symptom free lives Allergies debunks the many myths about allergies and offers long term help to both seasonal and chronic sufferers This comprehensive and authoritative resource helps you make informed choices about everything from diagnostic tests to nasal antihistamines and corticosteroid sprays from homeopathic remedies for poison ivy and insect bites to desensitizing therapies and emergency relief for severe allergic reactions and much more including A detailed evaluation of the most common over the counter drugs How to minimize allergens like mites pollen and danders in your house Useful advice for life threatening allergies such as food and stinging insects Allergies and exercise Allergies and pregnancy Skin disorders from allergies When allergy shots are unnecessary Self treatment versus traditional care How to recognize and avoid allergy scam treatments Allergies in children and the elderly Plus a comprehensive guide to reliable information on the internet **Animal**

Allergens: Common Protein Characteristics Featuring their Allergenicity Christiane Hilger, Annette Kuehn, 2015-07-13 Among the many molecules present in our environment some have the property to induce allergic sensitization and IgE mediated reactions The analysis of known major animal allergens has shown that most belong to single protein families lipocalins and serum albumins for inhalant allergens EF hand proteins tropomyosins and caseins for the digestive allergens The finding that allergens are often clustered in large families may be related to the fact that common structural biochemical or functional features contribute to their allergenicity in addition to external adjuvant factors Currently there is no curative treatment for animal allergy available In order to lower allergic reactions to respiratory allergens in daily life and to food allergens upon accidental exposure it is important to desensitize concerned patients Tolerance induction by allergen specific immunotherapy is in the current focus of an ambitious research This Research Topic aims to provide a comprehensive view of the basic and recent insights on the allergenicity of animal allergens in view of their structural and functional aspects as well as allergen specific immunotherapy
