World Food and Agriculture - Statistical Yearbook 2024 FAO,2024-11-18 The Statistical Yearbook 2024 offers a synthesis of the major factors at play in the global food and agricultural landscape Statistics are presented in four thematic chapters covering the economic importance of agricultural activities inputs outputs and factors of production their implications for food security and nutrition and their impacts on the environment The Yearbook is meant to constitute a primary tool for policymakers researchers and analysts as well as the general public interested in the past present and future path of food and agriculture *Organic Food and Farming in China* Steffanie Scott,Zhenzhong Si,Theresa Schumilas,Aijuan Chen,2018-10-03 Despite reports of food safety and quality scandals China has a rapidly expanding organic agriculture and food sector and there is a revolution in ecological food and ethical eating in China s cities This book shows how a set of social

economic cultural and environmental conditions have converged to shape the development of a formal organic sector created by top down state developed standards and regulations and an informal organic sector created by bottom up grassroots struggles for safe healthy and sustainable food This is generating a new civil movement focused on ecological agriculture and quality food Organic movements and markets have typically emerged in industrialized food systems that are characterized by private land ownership declining small farm sectors consolidated farm to retail chains predominance of supermarket retail standards and laws to safeguard food safety and an active civil society sector The authors contrast this with the Chinese context with its unique version of capitalism with social characteristics collective farmland ownership and predominance of smallholder agriculture and emerging diverse marketing channels China s experience also reflects a commitment to domestic food security evolving food safety legislation and a civil society with limited autonomy from a semi authoritarian state that keeps shifting the terrain of what is permitted The book will be of great interest to advanced students and researchers of agricultural and food systems and policy as well as rural sociology and Chinese studies

Plant Breeding: Past, Present and Future John E. Bradshaw, 2016-03-08 This book aims to help plant breeders by reviewing past achievements currently successful practices and emerging methods and techniques Theoretical considerations are also presented to strike the right balance between being as simple as possible but as complex as necessary The United Nations predicts that the global human population will continue rising to 9 0 billion by 2050 World food production will need to increase between 70 100 per cent in just 40 years First generation bio fuels are also using crops and cropland to produce energy rather than food In addition land area used for agriculture may remain static or even decrease as a result of degradation and climate change despite more land being theoretically available unless crops can be bred which tolerate associated abiotic stresses Lastly it is unlikely that steps can be taken to mitigate all of the climate change predicted to occur by 2050 and beyond and hence adaptation of farming systems and crop production will be required to reduce predicted negative effects on yields that will occur without crop adaptation Substantial progress will therefore be required in bridging the yield gap between what is currently achieved per unit of land and what should be possible in future with the best farming methods and best storage and transportation of food given the availability of suitably adapted cultivars including adaptation to climate change My book is divided into four parts Part I is an historical introduction Part II deals with the origin of genetic variation by mutation and recombination of DNA Part III explains how the mating system of a crop species determines the genetic structure of its landraces Part IV considers the three complementary options for future progress use of sexual reproduction in further conventional breeding base broadening and introgression mutation breeding and genetically modified crops
