Aspect And Predication The Semantics Of Argument Structure:

Aspect and Predication Gillian Ramchand, 1997 This book investigates the systematic correspondences between syntactic structure and semantic interpretation in the domain of predicate argument relationships It takes as its starting point the striking effects of nominal argument interpretation on aspectual semantics pursuing the intuition that these effects are not quirky or exceptional but are in fact the most visible reflexes of a more pervasive and systematic interaction between the aspectual event structure of a predicate and its arguments The Scottish Gaelic language is the empirical base of the investigation as it exhibits a set of predication structures which interact in a highly visible way with its aspectual system The book provides a detailed working out of a semantic system of argument classification which moves away from lexically driven thematic roles in the traditional sense and towards a more constrained syntactically motivated set of primitives

Argument Structure and Syntactic Relations Maia Duguine, Susana Huidobro, Nerea Madariaga, 2010-07-14 The topic of this collection is argument structure The fourteen chapters in this book are divided into four parts Semantic and Syntactic Properties of Event Structure A Cartographic View on Argument Structure Syntactic Heads Involved in Argument Structure and Argument Structure in Language Acquisition Rigorous theoretical analyses are combined with empirical work on specific aspects of argument structure The book brings together authors working in different linguistic fields semantics syntax and language acquisition who explore new findings as well as more established data but then from new theoretical perspectives The contributions propose cartographic views of argument structure as opposed to minimalistic proposals of a binary template model for argument structure in order to optimally account for various syntactic and semantic facts as well as data derived from wider cross linguistic perspectives

Theoretical and Crosslinguistic Approaches to the Semantics of Aspect Susan Deborah Rothstein, 2008 The papers in this volume investigate the semantics of aspect from both a theoretical and cross linguistic point of view in a wide range of languages from a number of different language families The papers are all informed by the belief that a thorough exposure to the expression of aspect cross linguistically is crucial for progress in understanding how the semantics of aspect and what the semantic basis of aspectual distinctions is The languages discussed include Russian English Dutch Hebrew Mandarin Japanese and Kalaallisut The issues discussed in this volume include the centrality of measuring and counting in an understanding of telicity the importance of the singular plural distinction in the study of aspect the importance of homogeneity as a property of event types the flexibility of lexical classes and the interaction between expressions of aspect and the particular morphosyntactic structure of a language

The Syntax of Aspect Nomi Erteschik-Shir, Tova R. Rapoport, 2005 This collection of new work focuses on issues at the lexicon syntax interface It presents innovative analyses of theoretical issues of aspectual interpretation in a variety of languages The authors address questions such as to what extent can variation in verbal meaning and thematic information can be determined in the syntax and how the interpretation of various syntactic constructions is derived once lexical information is
