Sustainability of Fossil Fuels Pavel A. Strizhak, 2019-07-11 The energy and fuel industries represent an extensive field for the development and implementation of solutions aimed at improving the technological environmental and economic performance of technological cycles In recent years the issues of ecology and energy security have become especially important Energy is firmly connected with all spheres of human economic life but unfortunately it also has an extremely negative often fatal effect on the environment and public health Depletion of energy resources the complexity of their extraction and transportation are also problems of a global scale Therefore it is especially important nowadays to try to take care of nature and think about the resources that are necessary for future generations For scientific teams in different countries the development of sustainable and safe technologies for the use of fuels in the energy sector will be a challenge in the coming decades Sustainability of Young Companies-Contemporary Trends and Challenges Marek Jabłoński, 2019-07-11 Ensuring the sustainability of early stage companies and increasing awareness of the need for balancing targets against different stakeholder groups among young companies are not well developed Young companies in the first place want to achieve financial success very often without regard for aspects such as the environment positive

relationships with employees suppliers or other stakeholder groups fulfilling requirements of labor law etc Another issue is that of companies whose business models are based on actuarially preferred concepts such as sharing economy sustainable development e comers e commerce renewable energy social media and others A key issue is the resignation of companies from an approach to business based on the foundations of classical economics to the sharing economy Theory and practice seek new solutions in the sphere of value sharing in these new areas of sharing and innovative forms of its implementation Intriguing is the relationship of these business models with sustainability issues as well as wondering how technology can influence sustainability A contemporary approach to consumer value fits in with the assumption of a shared economy It is interesting how it affects the assumptions of sustainability of business The ongoing changes in the value system of potential consumers create new conditions for the design of sustainability business models and creation of innovation

Handbook of Sustainability Science in the Future Walter Leal Filho, Anabela Marisa Azul, Federica Doni, Amanda Lange Salvia, 2023-08-14 Humanity will have to cope with many problems in the coming decades for instance the world population is likely grow to to 8 8 billion people by 2035 Also changing climate conditions are negatively affecting the livelihoods of millions of people In particular environmental disasters are causing substantial damages to properties From a social perspective the inequalities between rich and poor nations are becoming even deeper and in many countries conflicts between national and international interest groups are intensifying The above state of affairs suggest that a broader understanding of the trends which may lead to a more sustainable world is needed especially those which may pave the way for future developments In other words we need to pave the way for sustainable futures Consistent with this reality the proposed Encyclopedia of Sustainability Futures aims to identify document and disseminate ideas experiences and visions from scientists member of nongovernmental organisations decision makers industry representatives and citizens on themes and issues which will be important in pursuing sustainable future scenarios In particular the publication will focus on scientific aspects as well as on social and economic ones also considering matters related to financing and infra structures which are important in pursuing a sustainable future The Encyclopedia of Sustainability Futures will involve the contributing authors in line with the principle of co generation from across a wide range of disciplines e g education and social sciences natural sciences engineering the arts languages etc with papers adopting a long term sustainability perspective with a time horizon until 2050 The focus will be on themes which are felt as important in the future and the chapters are expected to interest and motivate a world audience This book is part of the 100 papers to accelerate the implementation of the UN Sustainable Development Goals initiative
