Moving Objects

Management Xiaofeng Meng, Jidong Chen, 2011-01-27 We live in an age of rapid technological development. The Internet already affects our lives in many ways. Indeed, we continue to depend more and more intrinsically on the Internet, which is increasingly becoming a fundamental piece of societal infrastructure, just as water supply, electricity grids, and transportation networks have been for a long time. But while these other infrastructures are relatively static, the Internet is undergoing swift and fundamental change. Notably, the Internet is going mobile. The world has some 6.7 billion humans, 4 billion mobile phones, and 1.7 billion Internet users. The two most populous continents, Asia and Africa, have relatively low Internet penetration and hold the greatest potentials for growth. Their mobile phone users, by far, outnumber their Internet users, and the numbers are growing rapidly. China and India are each gaining about half a dozen million new phone users per month. Users across the globe, as a whole, increasingly embrace mobile Internet devices; with smart phone sales starting to outnumber PC sales. Indeed, these and other facts suggest that the Internet stands to gain a substantial mobile component. This mega trend towards mobile is enabled by rapid and continuing advances in key technology areas such as mobile communication, consumer electronics, GPS positioning, and computing. In short, this is the backdrop for this very timely book on moving objects by Xiaofeng Meng and Jidong Chen.

Data Warehouse Systems Alejandro Vaisman, Esteban Zimányi, 2014-09-10 With this textbook, Vaisman and Zimányi deliver excellent coverage of data warehousing and business intelligence technologies, ranging from the most basic principles to recent findings and applications. To this end, their work is structured into three parts. Part I describes Fundamental Concepts, including multi-dimensional models, conceptual and logical data warehouse design, and MDX and SQL OLAP. Subsequently, Part II details Implementation and Deployment, which includes physical data warehouse design, data extraction, transformation, and loading (ETL), and data analytics. Lastly, Part III covers Advanced Topics, such as spatial data warehouses, trajectory data warehouses, semantic technologies in data warehouses, and novel technologies like Map Reduce, column store databases, and in-memory databases. As a key characteristic of the book, most of the topics are presented and illustrated using application tools. Specifically, a case study based on the well-known Northwind database illustrates how the concepts presented in the book can be implemented using Microsoft Analysis Services and Pentaho Business Analytics. All chapters are summarized using review questions and exercises to support comprehensive student learning. Supplemental material to assist instructors using this book as a course text is available at <http://cs.ulb.ac.be/DWSDIbook>, including electronic
