Educational Research: a Beginner's Guide Allyson Sesay, 2012-01-04 This book presents a rudimentary exposure to the field of educational research and an attempt to allay the unwarranted fear of those who perceive research as a highly technical and complex scholarly activity carried out by persons in the sciences The author takes the position that anyone can do research and that it can be an interesting and very worthwhile experience Educational research particularly action research

which the author emphasizes is an invaluable exercise about which everyone in education should be knowledgeable or at least be familiar. Starting with an explication of some salient concepts in the study of research e.g. research educational research, research problem v. research topic, hypothesis experimental v. non experimental research, the book takes the reader through the process of conducting a research problem from problem selection and statement, significance, review of literature, methodology, data analysis, findings to recommendations and conclusions. Detailed descriptions of the American Psychological Association APA style of referencing with ample examples are provided. The book is written in simple language so that even high school students will be able to acquire a fairly good understanding of each contents. Though the primary target population is undergraduate students of education, the contents are broad enough to provide a guide for students in other disciplines as well as whet the appetite of the general reader who seeks only a basic knowledge of research and or educational research.

A Guide to Research in Music Education Roger P. Phelps, 2005. This Fifth Edition presents an updated and practical approach to the research concepts, techniques and sources from the 4th edition. A new chapter concerning music and technology covers the current available resources for students and researchers. Other updates include separate chapters on philosophical inquiry and aesthetic inquiry, becoming integrated, formulating and implementing research problems and aligning qualitative research with recent concepts and techniques. This is an essential tool for students tackling problems as varied as research proposals, field research, strategies, data analysis and statistical techniques. Researchers will find current sources and concise instruction in the formulation of a research proposal, its implementation and dissemination of research results.

Educational Research: Why 'What Works' Doesn't Work Paul Smeyers, Marc Depaepe, 2007-01-07. Education and educational research according to the current fashion are supposed to be concerned with what works to the exclusion of all other considerations. All over the world and particularly in the English speaking countries, governments look for means of improving student achievement as measured by standardized test scores. Although such improvements are often to be welcomed, they do not answer all significant questions about what constitutes good education. Also the research on which they are based is not the only legitimate way to do educational research. Social research and therefore educational research cannot ignore the distinctive nature of what it studies, a social activity where questions of meaning and value cannot be eliminated and where interpretation and judgment play a crucial role. In this book, distinguished philosophers and historians of education from 6 countries focus on the problematical nature of the search for what works in educational contexts in practice as well as in theory. Beginning with specific problems, they move on to more general and theoretical considerations, seeking to go beyond over simple ideas about cause and effect and the rhetoric of performativity that currently has educational thinking in its grip. Freedom of inquiry in educational research can no longer be taken for granted. Narrow definitions of what constitutes scientific research, funding criteria that enforce particular research methods and policy decision processes that ignore any research that is not narrowly utilitarian, create a context in many countries that

discourages scholarship of a more speculative exploratory or critical sort This book brings together an exceptional combination of international and cross disciplinary scholars who bring the perspectives of history and philosophy of science to ask How did we arrive at this place and Where is educational research heading Thebook illuminates the anti intellectual consequences of a what works mentality in education and shows that the ostensibly scientific revolution in educational research in fact reflects an ahistorical and conceptually muddled understanding of what actually constitutes science This book could not be more timely and important Nicholas C Burbules Grayce Wicall Gauthier Professor University of Illinois With research increasingly tied to State policies with the instrumental purpose of guiding school reforms the volume provides an important historical and philosophical questioning of the possibilities limitations and challenges of education research Internationally leading scholars engage in a significant conversation that is sophisticated and nuanced for understanding contemporary debates Thomas S Popkewitz the University of Wisconsin Madison USA This publication is realized by the Research Community FWO Vlaanderen Research Foundation Flanders Belgium Philosophy and History of the Discipline of Education Evaluation and Evolution of the Criteria for Educational Research **Introduction to Educational Research** W. Newton Suter,2012 W Newton Suter argues that what is important in a changing education landscape is the ability to think clearly about research methods reason through complex problems and evaluate published research He explains how to evaluate data and establish its relevance
