Proceedings of the Conference on Applied Mathematics and Scientific Computing Zlatko Drmac, Miljenko Marusic, Zvonimir Tutek, 2005-02-23 The Third Conference on Applied Mathematics and Scientific Computing took place June 23-27 2003 on island of Brijuni Croatia The main goal of the conference was to interchange ideas among applied mathematicians in the broadest sense both from and outside academia as well as experts from other areas who apply different mathematical techniques During the meeting there were invited and contributed talks and software presentations Invited presentations were given by active researchers from the fields of approximation theory numerical methods for differential equations and numerical linear algebra These proceedings contain research and review papers by invited speakers and selected contributed papers from the fields of applied and numerical mathematics A particular aim of the conference was to encourage young scientists to present results of their research Traditionally the best presentation given by PhD student was rewarded This year awardee was Luka Grubišić University of Hagen Hagen Germany and we congratulate him for this achievement It would be hard to organize the conference without generous support of the Croatian Ministry of Science and Technology and we acknowledge it We are also indebted to the main organizer Department of Mathematics University of Zagreb Motivating beautiful nature should be also mentioned And at the end we are thankful to Drs Josip Tambaca and Ivica Nakic for giving this book its final shape

Concurrent Scientific Computing Eric F. Van de Velde, 2013-12-17 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs Preface A successful concurrent numerical simulation requires physics and mathematics to develop and analyze the model numerical analysis to develop solution methods and computer science to develop a concurrent implementation No single course can or should cover all these disciplines Instead this course on concurrent scientific computing focuses on a topic that is not covered or is insufficiently covered by other disciplines the algorithmic structure of numerical methods

Scientific Computing with Case Studies Dianne P. O'Leary, 2009-01-01 This book is a practical guide to the numerical solution of linear and nonlinear equations differential equations optimization problems and eigenvalue problems It treats standard problems and introduces important variants such as sparse systems differential algebraic equations constrained optimization Monte Carlo simulations and parametric studies Stability and error analysis are emphasized and the Matlab algorithms are grounded in sound principles of software design and understanding of machine arithmetic and memory management Nineteen case studies provide experience in mathematical modeling and algorithm design motivated by problems in physics engineering epidemiology chemistry and biology The topics included go well beyond the standard first course syllabus introducing important problems such as differential algebraic equations and conic optimization problems and important solution techniques such as continuation methods The case studies cover a wide variety of fascinating applications from modeling the spread of an epidemic to determining truss configurations
