Parallel Processing Techniques for Simulation Madan Singh, A.Y. Allidina, B.K. Daniels, 2013-11-21 This volume provides the proceedings of the First European Workshop on Parallel Processing Techniques for Simulation which was held at the end of October 1985 The Workshop was organized within the framework of a joint project sponsored by the Commission of the European Communities under the research part of the multiannual programme in the field of Data Processing aiming at promoting collaborative research work in the Community The project involved collaborative work between the Complex Systems Group of the Control Systems Centre at UMIST the Systems Reliability Service of the United Kingdom Atomic Energy Authority and the University of Bergamo Italy The aim of this project was to develop decomposition coordination techniques which would be of help in the simulation of complex dynamical systems on parallel processing facilities One of the major aims of the Workshop was to report on the results produced within the project and to try to relate these to the leading work going on in this field in other centres of excellence With this in mind the Proceedings Volume is split up into a number of parts corresponding to the main sessions within the Workshop programme

Neurological Functions of the Master Switch Protein Kinase - GSK-3 Oksana Kaidanovich-Beilin, Jean-Martin Beaulieu, Richard S. Jope, Jim R. Woodgett, The functions of the brain that allow us to think feel move and perceive the world are the result of an exchange of information within a network composed of millions of specialized cells called neurons and glia Neurons use neurotransmitters and other extracellular messengers to communicate with each other and to constantly update and reorganize their network of connections in a process known as neural plasticity In order to respond to these extracellular signals neurons are equipped with specialized receptors that can recognize a single neurotransmitter a bit like a lock would recognize a key They do this by activating or inhibiting a class of specialized signaling proteins and second messengers Typically signaling proteins are themselves organized in networks or pathways in which they activate or inhibit each other in order to integrate the mass of

information received by a single cell and to regulate the biological functions of this cell. As we can see rather than simply being a network of neurons the brain can be seen as a sort of Russian doll in which each neuron is at the same time a part of networks with other neurons and the receptacle of many networks composed of signaling proteins. Two individual genes encode two paralogous signaling proteins Glycogen Synthase Kinase 3 alpha and beta GSK 3a GSK 3b named for its ability to phosphorylate a key metabolic enzyme of glycogen synthesis glycogen synthase. This unique glamour and gloom protein kinase has been intriguing many researches for over 30 years by its unusual features still unknown mechanisms of its activation its regulation by multiple key intracellular pathways and its capacity to influence the functions of many substrates. Since GSK 3 was discovered there has been significant progress in elucidating its regulatory roles in the neuron and the structure and functions of the brain. Lithium has been used as a gold standard in the treatment of bipolar disorder for 60 years and GSK 3's renaissance in psychiatry began with the discovery of GSK 3 as lithium's intracellular target. Since then GSK3 has been implicated in the pathogenesis of mood disorders schizophrenia Alzheimer's disease ADHD multiple sclerosis Fragile X syndrome and Huntington disease. Connections to these and other diseases has led over the last 10 years to the generation of multiple types of GSK 3 inhibitors as promising therapeutic treatments for the aforementioned pathological conditions. During last couple years new genetic models have been generated including conventional and conditional mouse models allowing the discovery of new roles of GSK 3 in the mechanism of neurotransmitter action neurodevelopment learning and memory formation GSK 3's gene effect on mouse behavior and other functions. Thus GSK 3 has been well established as an intracellular second messenger for several neurotransmitter systems and as an important therapeutic target of mood stabilizers antipsychotics and psychomimetic drugs. The proposed Specific Topic for Frontiers in Neuroscience will be focused on the latest advances from leading laboratories in this area subdivided into 5 topics: 1 GSK 3 history mechanism of regulation substrate specificity and comparison between the brain function of two GSK 3 genes through new animal models and cell biology approaches 2 role of GSK 3 in neurodevelopment and neuronal structure 3 involvement of GSK 3 in synaptic functions learning and memory and in serotonin and dopamine pathways 4 role of GSK 3 in neuroinflammation and application to the pathogenesis of multiple sclerosis AD schizophrenia Fragile X brain tumors stroke and bipolar disorder 5 development of GSK 3 inhibitors and their application in psychiatry including special discussion about the mechanism of lithium action.

Orthogonal Polynomials in the Spectral Analysis of Markov Processes Manuel Domínguez de la Iglesia, 2021-10-21

In pioneering work in the 1950s S Karlin and J McGregor showed that probabilistic aspects of certain Markov processes can be studied by analyzing orthogonal eigenfunctions of associated operators. In the decades since many authors have extended and deepened this surprising connection between orthogonal polynomials and stochastic processes. This book gives a comprehensive analysis of the spectral representation of the most important one dimensional Markov processes namely

discrete time birth death chains birth death processes and diffusion processes It brings together the main results from the extensive literature on the topic with detailed examples and applications Also featuring an introduction to the basic theory of orthogonal polynomials and a selection of exercises at the end of each chapter it is suitable for graduate students with a solid background in stochastic processes as well as researchers in orthogonal polynomials and special functions who want to learn about applications of their work to probability
