OECD Urban Studies The Blue Economy in Cities and Regions A Territorial Approach OECD,2024-04-12 The blue economy is a major driver of urban and regional development creating millions of local jobs in water dependent sectors such as fisheries tourism and shipping However it can also contribute to carbon emissions and ecosystem degradation while its reliance on freshwater coastal and marine ecosystems exposes it to the impacts of climate change As the places where the blue economy takes place creates value and provides jobs cities and regions play a key role in unlocking the potential of a resilient blue economy that preserves the ecosystems that sustain it Building on a global survey of 80 cities regions and basins this report highlights the costs and benefits of the blue economy at subnational level shedding light on the link between the blue economy and water security This analysis provides an overview of the multi level governance of the blue economy and related gaps It calls on cities and regions to develop resilient inclusive sustainable and circular RISC proof blue economies by establishing the right governance conditions related to policy making policy coherence and policy implementation The report concludes with a RISC Assessment Framework that offers a self evaluation tool for subnational governments *Sustainability of Fossil Fuels* Pavel A. Strizhak,2019-07-11 The energy and fuel industries represent an

extensive field for the development and implementation of solutions aimed at improving the technological environmental and economic performance of technological cycles In recent years the issues of ecology and energy security have become especially important Energy is firmly connected with all spheres of human economic life but unfortunately it also has an extremely negative often fatal effect on the environment and public health Depletion of energy resources the complexity of their extraction and transportation are also problems of a global scale Therefore it is especially important nowadays to try to take care of nature and think about the resources that are necessary for future generations For scientific teams in different countries the development of sustainable and safe technologies for the use of fuels in the energy sector will be a challenge in the coming decades **Sustainability of Young Companies-Contemporary Trends and Challenges** Marek

Jabłoński,2019-07-11 Ensuring the sustainability of early stage companies and increasing awareness of the need for balancing targets against different stakeholder groups among young companies are not well developed Young companies in the first place want to achieve financial success very often without regard for aspects such as the environment positive relationships with employees suppliers or other stakeholder groups fulfilling requirements of labor law etc Another issue is that of companies whose business models are based on actuarially preferred concepts such as sharing economy sustainable

development e comers e commerce renewable energy social media and others A key issue is the resignation of companies from an approach to business based on the foundations of classical economics to the sharing economy Theory and practice seek new solutions in the sphere of value sharing in these new areas of sharing and innovative forms of its implementation Intriguing is the relationship of these business models with sustainability issues as well as wondering how technology can influence sustainability A contemporary approach to consumer value fits in with the assumption of a shared economy It is interesting how it affects the assumptions of sustainability of business The ongoing changes in the value system of potential consumers create new conditions for the design of sustainability business models and creation of innovation
