Sustainability Thomas Unnerstall,2022-10-27 Humans are overexploiting nature consuming too much energy too many raw materials too much land In short the current economic and living conditions of mankind especially here in the West are not sustainable Who would disagree with this verdict The evidence seems overwhelming species extinction rainforest deforestation scarcity of raw materials soil erosion plastic waste ecological footprint and of course climate change But how reliable are these indicators Are there perhaps also other indications positive developments And are all these problems of equal urgency This book gives you answers well founded comprehensible to the point It proves that the reports and headlines on ecological issues in the mainstream media are often one sided exaggerated and thus misleading The book does not trivialize but it differentiates Using the relevant international reports and databases it presents overall contexts where otherwise usually only individual striking figures are picked out With over 70 graphic illustrations the book thus paints a new picture of the state of the planet and of the effects of human economic activity and consumption At the end is a clear list of priorities for the real sustainability challenges for humanity as a whole and also for the people living in the West
