Art, Artisans and Apprentices James Ayres, 2014-06-30 Before the foundation of academies of art in London in 1758 and Philadelphia in 1805 most individuals who were to emerge as artists trained in workshops of varying degrees of relevance Easel painters began their careers apprenticed to carriage house sign or ship painters whilst a few were placed with those who made pictures Sculptors emerged from a training as ornamental plasterers or carvers Of the many other trades in a position to offer an appropriate background were limning staining engraving surveying chasing and die sinking In addition plumbers gained the right to use oil painting and for plasterers the application of distemper was an extension of their trade Central to the theme of this book is the notion that for those who were to become either painters or sculptor a training in a trade met their practical needs This training was of an altogether different nature to an education in an art school In the past prospective artists were offered by means of apprenticeships an empirical rather than a theoretical understanding of their ultimate vocation James Ayres provides a lively account of the inter relationship between art and trade in the late

seventeenth to early nineteenth centuries in both Britain and North America He demonstrates with numerous illustrated examples the many cross overs in the art and mystery of artistic training and to modern eyes the sometimes incongruous relationships between the various trades that contributed to the blossoming of many artistic careers including some of the most illustrious names of the long eighteenth century **Conservation of Cultural Heritage** Hanna M.

Szczepanowska,2013-02-15 Conservation of Cultural Heritage covers the methods and practices needed for future museum professionals who will be working in various capacities with museum collections and artifacts It also assists current professionals in understanding the complex decision making processes that face conservators on a daily basis The uniqueness of this book lies in correlating the aspects of material science and the behaviour of artifacts in a museum environment It will be of special benefit to museum professionals not trained in conservation Covering a broad range of topics that are key to sound conservation in the museum Conservation of Cultural Heritage is an important tool for students and professionals alike in ensuring that best practice is followed in the preservation of important collections
