Stork, 1990 **Artificial Neural Networks** P.J. Braspenning, F. Thuijsman, A.J.M.M. Weijters, 1995-06-02 This book presents carefully revised versions of tutorial lectures given during a School on Artificial Neural Networks for the industrial world held at the University of Limburg in Maastricht Belgium The major ANN architectures are discussed to show their powerful possibilities for empirical data analysis particularly in situations where other methods seem to fail Theoretical insight is offered by examining the underlying mathematical principles in a detailed yet clear and illuminating way Practical experience is provided by discussing several real world applications in such areas as control optimization pattern recognition software engineering robotics operations research and CAM **ARTIFICIAL NEURAL NETWORKS** B. YEGNANARAYANA, 2009-01-14 Designed as an introductory level textbook on Artificial Neural Networks at the postgraduate and senior undergraduate levels in any branch of engineering this self contained and well organized book highlights the need for new models of computing based on the fundamental principles of neural networks Professor Yegnanarayana compresses into the covers of a single volume his several years of rich experience in teaching and research in the areas of speech processing image processing artificial intelligence and neural networks He gives a masterly analysis of such topics as Basics of artificial neural networks Functional units of artificial neural networks for pattern recognition tasks Feedforward and Feedback neural networks and Architectures for complex pattern recognition tasks Throughout the emphasis is on the pattern processing feature of the neural networks Besides the presentation of real world applications provides a practical thrust to the discussion Geophysical Applications of Artificial Neural Networks and Fuzzy Logic W. Sandham, M. Leggett, 2013-06-29 The past fifteen years has witnessed an explosive growth in the fundamental research and applications of artificial neural networks ANNs and fuzzy logic FL The main impetus behind this growth has been the ability of such methods to offer solutions not amenable to conventional techniques particularly in application domains involving pattern recognition prediction and control Although the origins of ANNs and FL may be traced back to the 1940s and 1960s respectively the most rapid progress has only been achieved in the last fifteen years This has been due to significant theoretical advances in our understanding of ANNs and FL complemented by major technological developments in high speed computing In geophysics ANNs and FL have enjoyed significant success and are now employed routinely in the following areas amongst others 1 Exploration Seismology a Seismic data processing trace editing first break picking deconvolution and multiple suppression wavelet estimation velocity analysis noise identification reduction statics analysis dataset matching prediction attenuation b AVO analysis c Chimneys d Compression I dimensionality reduction e Shear wave analysis f Interpretation event tracking lithology prediction and well

Artificial Neural Networks Nicolaos Karayiannis, Anastasios N. Venetsanopoulos, 2013-06-29 1 1 Overview We are living in a decade recently declared as the Decade of the Brain Neuroscientists may soon manage to work out a functional map of the brain thanks to technologies that open windows on the mind With the average human brain consisting of 15 billion neurons roughly equal to the number of stars in our milky way each receiving signals through as many as 10 000 synapses it is quite a view The brain is the last and greatest biological frontier says James Weston codiscoverer of DNA considered to be the most complex piece of biological machinery on earth After many years of research by neuroanatomists and neurophysiologists the overall organization of the brain is well understood but many of its detailed neural mechanisms remain to be decoded In order to understand the functioning of the brain neurobiologists have taken a bottom up approach of studying the stimulus response characteristics of single neurons and networks of neurons while psychologists have taken a top down approach of studying brain functions from the cognitive and behavioral level While these two approaches are gradually converging it is generally accepted that it may take another fifty years before we achieve a solid microscopic intermediate and macroscopic understanding of brain *Handbook of Neural Computing Applications* Alianna J. Maren, Craig T. Harston, Robert M.

Pap, 2014-05-10 *Handbook of Neural Computing Applications* is a collection of articles that deals with neural networks Some papers review the biology of neural networks their type and function structure dynamics and learning and compare a back propagating perceptron with a Boltzmann machine or a Hopfield network with a Brain State in a Box network Other papers deal with specific neural network types and also on selecting configuring and implementing neural networks Other papers address specific applications including neurocontrol for the benefit of control engineers and for neural networks researchers Other applications involve signal processing spatio temporal pattern recognition medical diagnoses fault diagnoses robotics business data communications data compression and adaptive man machine systems One paper describes data compression and dimensionality reduction methods that have characteristics such as high compression ratios to facilitate data storage strong discrimination of novel data from baseline rapid operation for software and hardware as well as the ability to recognized loss of data during compression or reconstruction The collection can prove helpful for programmers computer engineers computer technicians and computer instructors dealing with many aspects of computers related to programming hardware interface networking engineering or design **Transputer Applications and Systems '94** A.
