,1915 Novedades en vía aérea difícil IGLESIAS GONZÁLEZ, José Luis,2016-11-15 El gran avance efectuado en las dos últimas décadas en la formación dentro del campo del manejo de la vía aérea por parte de los especialistas en Anestesiología y Reanimación es innegable Múltiples estudios y publicaciones ponen de manifiesto que pese a este desarrollo formativo y tecnológico la vía aérea difícil sigue constituyendo si no el mayor desafío un reto diario de nuestra actividad ya que la morbilidad asociada a las prácticas anestésicas sigue relacionada en un elevado porcentaje a un correcto y adecuado manejo de la vía aérea Cerca de un tercio de todos los resultados adversos de la anestesia se deben a problemas respiratorios y de forma semejante también el 33% de las muertes post anestésicas son consecuencia de problemas relacionados con el manejo

de la vía aérea cuyo peor escenario es la imposibilidad de intubar y/o ventilar una vía aérea difícil. Además, en el 76% de los casos se considera que el procedimiento seguido no es el adecuado y se atribuye este déficit a una formación inadecuada. El control de la vía aérea es el componente primordial de las técnicas de anestesia general y de reanimación cardiopulmonar. Múltiples programas de formación lo contemplan pero su enseñanza sigue siendo diferente y dispar dependiendo de múltiples variables: formación personal y del grupo de trabajo, así como el material disponible en cada centro de trabajo. La introducción continua de materiales como los nuevos dispositivos supraglóticos, videolaringoscopios y la intubación asistida por fibrobroncoscopio, así como la publicación y desarrollo por parte de múltiples sociedades científicas de Anestesiología de nuevos algoritmos de actuación, han aumentado también la complejidad del aprendizaje. Aunque afortunadamente el final de la actuación sobre la vía aérea es un momento satisfactorio, el descenso del tono del pulsioxímetro continúa siendo uno de los momentos más estresantes que puede afrontar cualquier anestesista. logo
