Animal Cognition Thomas R. Zentall, 2013-12-02 Prepared as a tribute to Donald A Riley the essays that appear here are representative of a research area that has loosely been classified as animal cognition a categorization that reflects a functionalist philosophy that was prevalent in Riley's laboratory and that many of his students absorbed According to this philosophy it is acceptable to hypothesize that an animal might engage in complex processing of information as long as one can operationalize evidence for such a process and the hypothesis can be presented in the context of testable predictions that can differentiate it from other mechanisms The contributions to this volume represent the three most important areas of research in animal cognition stimulus representation memory processes and perceptual processes although current research has considerably blurred these distinctions

The Evolution of Intelligence Robert J. Sternberg, James C. Kaufman, 2013-06-17 How is one to understand the nature of intelligence One approach is through psychometric testing but such an approach often puts the cart before the horse the test before the theory Another approach is to use evolutionary theory This criterion has been suggested by a number of individuals in the past from Charles Darwin in the more distant past to Howard Gardner Stephen Gould Steven Pinker Carl Sagan David Stenhouse and many others The chapters in this book address three major questions 1 Does evolutionary theory help us understand the nature of human intelligence 2 If so what does it tell us about the nature of human intelligence 3 And if so how has intelligence evolved The goal of this book is to present diverse points of view on the evolution of intelligence as offered by leading experts in the field In particular it may be possible to better understand the nature and societal implications of intelligence by understanding how and why it has evolved as it has This book is unique in offering a diversity of points of view on the topic of the evolution of human intelligence

Visual Information Processing Kimiyo Murata-Soraci, 2003-03-30 Visual information processing in humans with intellectual disabilities and in animals is presented for conceptual and methodological reasons Much of the evolutionary path of higher primate species has involved the development of sophisticated visual systems that interact with complex higher order cognitive processes Key questions in cognitive science address the manner in which the environment is represented by the organism and thus relate to how knowledge about the world is gleaned with implications for theories of action and decision making Finally it has become apparent that the distinction between perceptual and cognitive processes is not always a clear one and that these processes interact in critical ways in underlying complex behavioral repertoires Consistent with the emphasis in this series on individual differences both typical and atypical development are explored here Philosophical approaches to visualism are also presented Chapters have import both for basic science and for the

development of applications
