digital technologies that catalyze further productivity gains Two issues explain the usage gap the affordability of these new technologies and the willingness to use them For the 40 percent of Africans below the extreme poverty line mobile data plans alone would cost one third of their incomes in addition to the price of access devices apps and electricity Data plans for small and medium businesses are also more expensive than in other regions Moreover shortcomings in the quality of internet services and in the supply of attractive skill appropriate apps that promote entrepreneurship and raise earnings dampen people s willingness to use them For those countries already using these technologies the development payoffs are significant New empirical studies for this report add to the rapidly growing evidence that mobile internet availability directly raises enterprise productivity increases jobs and reduces poverty across Africa To realize these and other benefits more widely Africa s countries must implement complementary and mutually reinforcing policies to strengthen both consumers ability to pay and willingness to use digital technologies These interventions must prioritize productive use to generate large numbers of inclusive jobs in a region poised to benefit from a massive youthful workforce one projected to become the world s largest by the end of this century
