Chakravorti, 2022-06-23 With the advent of digital technologies society is reshaping itself radically In the last decade digital technologies have brought fundamental changes in the industry and business environment The holistic socioeconomic and industrial changes are a result of general purpose technology aspects of digital transformation which are rare and have inherent capabilities of self transformation to bring long term benefits across the entire global business environment After the steam engine electric generator and printing press the recent development of digital transformation has created an opportunity with extensive sustainable and incremental influence for disruption and renovation However the most important difference between digital transformation and the previous general purpose technologies such as steam engines and electric generators is the pace of technology s penetration across the globe To cope with the accelerated speed of global digitization the digital transformation process should be accepted adopted and adapted across society and business utilizing a multi dimensional strategy This book illustrates a strategic structure that covers Digital Challenges for Industries Applicability for Digital Transformation Digital Transformation Framework People and Organization Structure Capability Delivery Activities and Life Cycle Benefits How will businesses embrace digital transformation How will organizations formulate a digital transformation strategy How will they invest in digital technologies To answer these questions a strategic structure is created which can provide guidelines to businesses to create a framework for digital transformation that includes strategy process governance and funding The exponential growth in data capacity storage process and communication due to rapid digitalization has created infinite opportunities and different dimensions to businesses Digital platforms have enabled alternative business models by deconstructing the traditional value chains Agile concepts driven by design thinking have brought innovative perspectives with an environment of boundless disruption To run a company with sustainability and manage disruptions more consciously the adoption of a digital platform with an appropriate strategy is the only viable option

Digital transformation DX goals and strategies should be in line with a company's business objectives. The strategic structure explained in the book is a global framework that can be adopted by any profit or nonprofit organization. Like any other transformational process, digital transformation has created structural tension between old and new. In this tension, employees play a large role, and their clarity of thought regarding the transformation process is of paramount interest. To overcome this tension, companies need to orient as learning organizations which will provide opportunities for growth in an ambidextrous environment embraced with a digital ecosystem. The book explains how the structural tension between old and new can be mitigated by effectively involving all stakeholders in the transformation process. **Digital Africa** Tania

Begazo, Moussa Blimpo, Mark Dutz, 2023-04-04. All African countries need better and more jobs for their growing populations. Digital Africa: Technological Transformation for Jobs shows that broader use of productivity-enhancing digital technologies by enterprises and households is imperative to generate such jobs, including for lower-skilled people. At the same time, broader use can support not only countries' short-term objective of postpandemic economic recovery but also their vision of economic transformation with more inclusive growth. These outcomes are not automatic, however. Mobile internet availability has increased throughout the continent in recent years, but Africa's uptake gap is the highest in the world. Areas with at least 3G mobile internet service now cover 84 percent of country populations, averaged across Sub-Saharan Africa, but only 22 percent use such services. The average African business lags in the use of smartphones and computers, as well as more sophisticated digital technologies that catalyze further productivity gains. Two issues explain the usage gap: the affordability of these new technologies and the willingness to use them. For the 40 percent of Africans below the extreme poverty line, mobile data plans alone would cost one-third of their incomes, in addition to the price of access devices, apps, and electricity. Data plans for small and medium businesses are also more expensive than in other regions. Moreover, shortcomings in the quality of internet services and in the supply of attractive, skill-appropriate apps that promote entrepreneurship and raise earnings dampen people's willingness to use them. For those countries already using these technologies, the development payoffs are significant. New empirical studies for this report add to the rapidly growing evidence that mobile internet availability directly raises enterprise productivity, increases jobs, and reduces poverty across Africa. To realize these and other benefits more widely, Africa's countries must implement complementary and mutually reinforcing policies to strengthen both consumers' ability to pay and willingness to use digital technologies. These interventions must prioritize productive use to generate large numbers of inclusive jobs in a region poised to benefit from a massive youthful workforce, one projected to become the world's largest by the end of this century. *Leading and Managing in the Digital Era* Gregory Prastacos, Nancy Pouloudi, 2024-12-30.
