Agro Ecological Farming Systems In China:

Agro-ecological Farming Systems in China Wenhua Li, 2001 Concepts principles history classification structure and function analysis of various models in the same production sector and in different sectors at different scales in mountain and dryland ecosystems The book is aimed primarily at young post graduate scientists in the disciplines or at agronomy forestry animal husbandry land use management and ecology experts *Agro-Ecological Farming Systems in China* Wenhua Li, 2001-06-15 This is the first English language text written by China's leading scientists documenting the history principles models and assessment of ecological agriculture in China and its integrated farming system In twenty detailed chapters the book covers all aspects of China's integrated farming system including rotation relay intercropping and intercropping polyaquaculture mixed stands afforestation agro silviculture intercropping for tree medicinal herbs as well as cash and multiuse forests phyto animal systems mountain ecosystems wetland ecosystems arid and semi arid ecosystems agro industry complex ecological engineering and multi component and multi step use of energy resources The book's final chapters set forth a systematic design for an integrated farming system instructions on analyzing and assessing integrated farming systems and a perspective on recent trends obstacles and the future Agroecology in China Luo Shiming, Stephen R. Gliessman, 2017-03-27 Key features Reviews the development of agroecology in China including research practice management and education regarding challenges for rural and agricultural progress Presents information from sources not readily available in the West about agricultural development in China during the last several decades Provides models and indicates starting points for future research and practice Addresses how to meet future challenges of agroecosystems from the field to the table in China from scientific technological and management perspectives During the past 30 years industrialization has fundamentally changed traditional rural life and agricultural practices in China While the incomes of farmers have increased serious issues have been raised concerning the environment resource depletion and food safety In response the Chinese government and Chinese scientists encouraged eco agriculture the practice of agroecology principles and philosophy as a way to reduce the negative consequences of large scale industrialized systems of farming Agroecology in China Science Practice and Sustainable Management represents the work of experts and leaders who have taught researched and expanded Chinese agroecology and eco agriculture for more than 30 years It reviews decades of agricultural change to provide an integrated analysis of the progress of research and development in agroecological farming practices The book contains research on traditional and newly developed agricultural systems in China including intercropping systems rainfall harvest systems and rice duck rice fish and rice frog co culture systems It covers current eco agriculture practices in the major regions of China according to climate conditions The book closes with a discussion of the major technical approaches necessary policy support and possible major development stages that must occur to allow broader agroecological implementations toward the sustainability of future food systems in China Presenting eco agriculture systems

that are somewhat unique in comparison to those of the United States Latin America and Europe Agroecology in China gives insight on how Chinese agroecologists under the political and cultural systems specific to China have created a strong foundation for ecologically sound agroecosystem design and management that can be applied and adapted to food systems elsewhere in the world By using selected regional examinations of agroecological efforts in China as examples this book provides models of how to conduct research on a broad range of agroecosystems found worldwide *The Carbon Farming Solution* Eric Toensmeier, 2016-02-22 With carbon farming agriculture ceases to be part of the climate problem and becomes a critical part of the solution This book is the toolkit for making the soil itself a sponge for carbon It s a powerful vision Bill McKibben The Carbon Farming Solution is a book we will look back upon decades from now and wonder why something so critically relevant could have been so overlooked until that time It describes the foundation of the future of civilization Paul Hawken In this groundbreaking book Eric Toensmeier argues that agriculture specifically the subset of practices known as carbon farming can and should be a linchpin of a global climate solutions platform Carbon farming is a suite of agricultural practices and crops that sequester carbon in the soil and in above ground biomass Combined with a massive reduction in fossil fuel emissions and in concert with adaptation strategies to our changing environment carbon farming has the potential to bring us back from the brink of disaster and return our atmosphere to the magic number of 350 parts per million of carbon dioxide Toensmeier s book is the first to bring together these powerful strategies in one place Includes in depth analysis of the available research Carbon farming can take many forms The simplest practices involve modifications to annual crop production Although many of these modifications have relatively low sequestration potential they are widely applicable and easily adopted and thus have excellent potential to mitigate climate change if practiced on a global scale Likewise grazing systems such as silvopasture are easily replicable don t require significant changes to human diet and given the amount of agricultural land worldwide that is devoted to pasture can be important strategies in the carbon farming arsenal But by far agroforestry practices and perennial crops present the best opportunities for sequestration While many of these systems are challenging to establish and manage and would require us to change our diets to new and largely unfamiliar perennial crops they also offer huge potential that has been almost entirely ignored by climate crusaders Many of these carbon farming practices are already implemented globally on a scale of millions of hectares These are not minor or marginal efforts but win win solutions that provide food fodder and feedstocks while fostering community self reliance creating jobs protecting biodiversity and repairing degraded land all while sequestering carbon reducing emissions and ultimately contributing to a climate that will remain amenable to human civilization Just as importantly to a livable future these crops and practices can contribute to broader social goals such as women s empowerment food sovereignty and climate justice The Carbon Farming Solution is at its root a toolkit and the most complete collection of climate friendly crops and practices currently available With this toolkit farmers communities and governments large and small can successfully launch carbon farming projects with

the most appropriate crops and practices to their climate locale and socioeconomic needs Toensmeier's ultimate goal is to place carbon farming firmly in the center of the climate solutions platform alongside clean solar and wind energy With The Carbon Farming Solution Toensmeier wants to change the discussion impact policy decisions and steer mitigation funds to the research projects and people around the world who envision a future where agriculture becomes the protagonist in this fraught urgent and unprecedented drama of our time Citizens farmers and funders will be inspired to use the tools presented in this important book to transform degraded lands around the world into productive carbon storing landscapes

Organic Food and Farming in China Steffanie Scott, Zhenzhong Si, Theresa Schumilas, Aijuan Chen, 2018-10-03 Despite reports of food safety and quality scandals China has a rapidly expanding organic agriculture and food sector and there is a revolution in ecological food and ethical eating in China's cities This book shows how a set of social economic cultural and environmental conditions have converged to shape the development of a formal organic sector created by top down state developed standards and regulations and an informal organic sector created by bottom up grassroots struggles for safe healthy and sustainable food This is generating a new civil movement focused on ecological agriculture and quality food Organic movements and markets have typically emerged in industrialized food systems that are characterized by private land ownership declining small farm sectors consolidated farm to retail chains predominance of supermarket retail standards and laws to safeguard food safety and an active civil society sector The authors contrast this with the Chinese context with its unique version of capitalism with social characteristics collective farmland ownership and predominance of smallholder agriculture and emerging diverse marketing channels China's experience also reflects a commitment to domestic food security evolving food safety legislation and a civil society with limited autonomy from a semi authoritarian state that keeps shifting the terrain of what is permitted The book will be of great interest to advanced students and researchers of agricultural and food systems and policy as well as rural sociology and Chinese studies

Sustainable Ecological Agriculture in China Tian Shi, 2010 Ecological economics emphasizes the two way interdependencies between the micro and macro levels Although the questions about ecological agricultural research arise from the local level their answers may lie at higher levels within the realm of political economy Therefore it requires substantial research not only on the links between local production systems and the larger national economy political structures and decision making processes but also the role and limitations of the national and local authorities in policy development and implementation There is also scant research on Chinese ecological agriculture published in English This book helps fill the void It employs a trans disciplinary approach to investigate the connection and discrepancy between knowledge and actions It presents methodological perspectives and practical suggestions for the comprehensive analysis of ecological agriculture as inputs to improved agricultural policy making for sustainability practices In this way this book illuminates the possibility of bridging the gap between local level implementation and the larger political economic processes This book helpfully provides a comprehensive analytical

framework within which agricultural sustainability can be better analyzed and understood by articulating ecological economics as a policy science to guarantee transparency and fairness in the decision making process It shows the important role that traditional culture can play in promoting ecologically and socially sound development It further emphasizes the imperative to move the ideology of ecological agriculture into the political realm and promotes a continuous dialogue between researchers practitioners and policy makers It also suggests that local government has a significant role to play in establishing appropriate institutional arrangements and policy settings e g bottom up policy initiatives for sustainable ecological agricultural development By elaborating on the methodological synthesis of ecological economics and system dynamics modeling as a holistic approach to facilitate an improved policy making process for agricultural sustainability this book demonstrates the effectiveness of this alternative approach to improve policy making process and facilitate the realization of sustainability through a case study in China This book will be an important resource not only to those interested in China but also to scholars and policy makers around the world because of its global relevance in the areas of ecological economics ecological agriculture sustainable resource management political economy system dynamics thinking and modeling and participation in the policy making process

Environment Jules Pretty,2006-06-23 This four volume set explores the locations where the environment matters most such as where people are poor where environments are under threat such as on frontiers where there are few natural resources remaining and where industrialization is rampant It will also explore these concerns at different system levels from local community to regional national and global It will also explore costs of damage to the very resources on which economies rely and the values of environmental goods and services and the controversies surrounding such valuations It is organized around environment people interactions livelihoods poverty income economic growth environment environment interactions do people matter and people people interactions collective action challenges institutions

Biocultural Landscapes Sun-Kee Hong,Jan Bogaert,Qingwen Min,2014-07-31 This book is devoted to the cultural and biological dimensions and values of landscapes linking the concepts of biodiversity landscape and culture and presenting an essential approach for landscape analysis interpretation and sustainable dynamics Early chapters explore the concepts and values of biocultural landscapes before addressing the methodology to identify the relationship between biological and cultural diversity The volume continuous with a series of case studies and with an exploration of the key role of biocultural diversity in contemporary landscape ecology Readers will learn the importance of landscapes for different fields of natural and human sciences and are confronted to the trans disciplinary nature of the landscape concept itself A hierarchical approach to landscapes in which they are composed of interacting eco systems is shown to be essential in recognizing their emergent properties In this work the biocultural values of landscapes are explored through their diversity in geographical scopes methodological approaches and conceptual assumptions Authors from Asia Europe and North America present diverse research experiences and views on biocultural landscapes their pattern conservation and

management Landscape ecologists will find this work particularly appealing as well as anyone with an interest in sustainable landscape development nature conservation or cultural heritage management This volume is the outcome of a symposium on Biodiversity in Cultural Landscapes organized in the framework of the 8th IALE World Congress held in Beijing in 2011

Farming Systems and Poverty John A. Dixon, David P. Gibbon, Aidan Gulliver, Food and Agriculture Organization of the United Nations, 2001-01-01 Small farmers produce much of the developing world's food Yet they are generally much poorer than the rest of the population in these countries and are less food secure than even the urban poor Furthermore although the majority of the world's population will live in urban areas by 2030 farming populations will not be much smaller than they are today For the foreseeable future therefore dealing with poverty and hunger in much of the world means confronting the problems that small farmers and their families face in their daily struggle for survival Through an examination of a wide variety of farming systems across the developing world this book co published with the World Bank shows how the farming systems approach can be used to identify key local regional and international priorities for the reduction of hunger and poverty

Contemporary Ecology Research in China Wenhua Li, 2015-10-26 The Chinese government is increasingly focusing on ecological construction and has subscribed to a national Ecological Civilization Construction Ecological research and protection practice develop so fast and achieve a lot at the national agenda This book is a synthesis of five most exciting and dominant themes in contemporary ecological research in China biodiversity ecosystem management degraded ecosystem restoration global change and sustainable development This book spans all the Earth's major ecosystems such as forests oceans grasslands wetlands lakes rivers farmland and cities This book provides a platform for scientific research across a variety of disciplines It will be invaluable to experts policymakers and local officers and will also be a highly useful resource for undergraduate and postgraduate students This book will allow researchers students and policymakers outside China to learn about the significant achievements and applications of ecological research within China
