An Application Science for Multi-Agent Systems Thomas A. Wagner,2006-04-11 An Application Science For Multi Agent Systems addresses the complexity of choosing which multi agent control technologies are appropriate for a given problem domain or a given application Without such knowledge when faced with a new application domain agent developers must rely on past experience and intuition to determine whether a multi agent system is the right approach and if so how to structure the agents how to decompose the problem and how to coordinate the activities of the agents and so forth This unique collection of contributions written by leading international researchers in the agent community provides valuable insight into the issues of deciding which technique to apply and when it is appropriate to use them The contributions also discuss potential trade offs or caveats involved with each decision An Application Science For Multi Agent Systems is an excellent reference for anyone involved in developing multi agent systems

Understanding Agent Systems Mark d'Inverno, Michael Luck, 2013-12-20

Around ten years ago when we were both PhD students working on different but related aspects of artificial intelligence we shared an office in the furthest corner of the Department of Computer Science at University College London Our friendship began then but our professional collaboration only really got going when we both left one of us moving the few yards to the University of Westminster and the other further afield to the University of Warwick and later the University of Southampton Nevertheless we can trace back many of our inspirations to those days at UCL in discussions with Derek Long John Campbell Maria Fox and John Wolstencroft who all contributed to our initial enthusiasm for working in this area On leaving UCL however we tried to bring our research interests together in the newly emerging area of agent based systems but found difficulties in communication with each other over basic terms and concepts simply due to the immaturity of the field In other words the problems we had in finding a base on which to develop our ideas set us on a long path over a number of years resulting in our construction and refinement of a conceptual framework within which to define analyse and explore different aspects of agents and multi agents systems This is the work reported in this book
